

GASTROPODS

Gastropods are the largest group of mollusks with over 80,000 marine and freshwater species including snails, slugs, abalone, conches and many more. The typical gastropod has a flexible body enclosed in a spiral shell. The body can be extended when moving or feeding and withdrawn into the shell for protection. The gastropod body features a muscular foot used for locomotion and a defined head with two to four tentacles with eyes. They may be herbivores or carnivores. Many have a structure called a radula which they use to bore holes through the shells of other mollusks they feed on.
