Integrated life cycle assessment of concrete structures fib Fédération Internationale du béton, 2013-09-03 Concrete is after water the second most used material The production of concrete in the industrialized countries annually amounts to 1 5 3 tonne per capita and is still increasing This has significant impact on the environment Thus there is an urgent need for more effective use of concrete in structures and their assessment The scope of activities of the fib Task Group 3 7 was to define the methodology for integrated life cycle assessment of concrete structures considering main essential aspects of sustainability such as environmental economic and social aspects throughout the whole life of the concrete structure The aim was to set up basic methodology to be helpful in development of design and assessment tools focused on sustainability of concrete structure within the whole life cycle Integrated Life Cycle Assessment ILCA represents an advanced approach integrating different aspects of sustainability in one complex assessment procedure The integrated approach is necessary to

insure that the structure will serve during the whole expected service life with a maximum functional quality and safety while environmental and economic loads will be kept at a low level The effective application and quality of results are dependent on the availability of relevant input data obtained using a detailed inventory analysis based on specific regional conditions The evaluation of the real level of total quality of concrete structure should be based on a detailed ILCA analysis using regionally or locally relevant data sets *Guidance for Good Bridge Design* fib Fédération internationale du béton,2000-01-01

Addressed to designers and even more so to owners and project managers this part is meant as a guide to an efficient selection of designers and contractors and to the preparation of fair contracts providing high quality at reasonable cost Clearly a good design must be paid for at its real cost economising on the design cost can be extremely counterproductive for the owner when considering the final whole life cost of the project In addition it was considered very important to address the designer s responsibilities and relations with other participants in large projects and finally design philosophy itself Part 2 Design and construction aspects This more technical part is mainly addressed to bridge designers and devoted to a systematic analysis of structural and constructional bridge concepts Considering the importance of erection techniques in the development of bridge design this second part of the guide starts by a description of the different construction methods their advantages and draw backs their particularities and of course by defining the domain of their most efficient applications Another main chapter is devoted to the proper design of cross sections And finally a third main chapter deals in detail with the influence of construction techniques on design **Model Code 2010 - First complete draft - Volume 2** fib Fédération internationale du béton,2010-01-01

The Model Code for Concrete Structures is intended to serve as a basis for future codes It takes into account new developments with respect to concrete structures the structural material concrete and new ideas for the requirements to be formulated for structures in order to achieve optimum behaviour according to new insights and ideas It is also intended as a source of information for updating existing codes or developing new codes for concrete structures At the same time the Model Code is intended as an operational document for normal design situations and structures Concrete Structures for Oil and Gas Fields in Hostile Marine Environments fib Fédération internationale du béton,2008-12-01 Concrete offshore structures have been successfully delivered to the international oil and gas industry for more than 35 years Some 50 major concrete platforms of different shapes and sizes supporting large production and storage facilities are currently operating in hostile marine environments worldwide and have excellent service records After some years with little development activity today there is a renewed interest in robust structures for the Arctic environment for Liquefied Natural Gas LNG terminals and for special floating barges and vessels Currently concrete solutions are being considered for projects north and east of Russia north of Norway and offshore Newfoundland among others Concrete is also in increasing demand in built up coastal areas for a variety of purposes such as harbour works tunnels and bridges cargo terminals parking garages and sea front housing developments where durability and robustness are essential The mandate of

fib Task Group 1 5 was to gather the experience and know how pertinent to the development design and execution of offshore concrete structures and to elaborate on the applicability of concrete structures for the Arctic environments The findings of the Task Group are presented in fib Bulletin 50 The report is based on experience gained from the design execution and performance of a number of offshore concrete structures around the world and in particular in the North Sea Ongoing inspections have shown excellent durability and structural performance even in structures that have exceeded their design lives in conditions often characterized by extreme wave loads freezing conditions hurricane force winds and seismic actions This forms the background for discussing the applicability of concrete structures for the Arctic regions Although to a large extent dedicated to oil and gas related structures the report is also relevant to other marine applications where the same design principles material selection criteria and construction methods apply fib Bulletin 50 is not in itself a code nor is it a textbook Rather extensive reference is made to proven and readily available design codes and construction guides as well as relevant papers and proceedings and other fib publications
