The Philosophy of Causality in Economics Mariusz Maziarz, 2020-05-13 Approximately one in six top economic research papers draws an explicitly causal conclusion But what do economists mean when they conclude that A causes B Does cause say that we can influence B by intervening on A or is it only a label for the correlation of variables Do quantitative analyses of observational data followed by such causal inferences constitute sufficient grounds for guiding economic policymaking The Philosophy of Causality in Economics addresses these questions by analyzing the meaning of causal claims made by economists and the philosophical presuppositions underlying the research methods used The book considers five key causal approaches the regularity approach probabilistic theories counterfactual theories mechanisms and interventions and manipulability Each chapter opens with a summary of literature on the relevant approach and discusses its reception among economists The text details case studies and goes on to examine papers which have adopted the approach in order to highlight the methods of causal inference used in contemporary economics It analyzes the meaning of the causal claim put forward and finally reconstructs the philosophical presuppositions accepted implicitly by economists The strengths and limitations of each method of causal inference are also considered in the context of using the results as evidence for policymaking This book is essential reading to those interested in literature on the philosophy of economics as well as the philosophy of causality and economic methodology in general

*Financial Market Bubbles and Crashes, Second Edition* Harold L. Vogel,2018-08-16 Economists broadly define financial asset price bubbles as episodes in which prices rise with notable rapidity and depart from historically established asset valuation multiples and relationships Financial economists have for decades attempted to study and interpret bubbles through the prisms of rational expectations efficient markets and equilibrium arbitrage and capital asset pricing models but

they have not made much if any progress toward a consistent and reliable theory that explains how and why bubbles and crashes evolve and can also be defined measured and compared This book develops a new and different approach that is based on the central notion that bubbles and crashes reflect urgent short side rationing which means that as such extreme conditions unfold considerations of quantities owned or not owned begin to displace considerations of price      **Data**

**Limitations of contract farming as a pro-poor strategy: The case of maize outgrower schemes in upper West Ghana** Ragasa, Catherine, Lambrecht, Isabel, Kufoalor, Doreen S., 2017-03-30 The focus in this paper is on two relatively large maize based contract farming CF schemes with fixed input packages Masara and Akate and a number of smaller and more flexible CF schemes in a remote region in Ghana Upper West Results show that these schemes led to improved technology adoption and yield increases In addition a subset of maize farmers with high yield improvements due to CF participation had high gross margins However on average yields were not high enough to compensate for higher input requirements and cost of capital On average households harvest 29 30 bags 100 kg each or 2 9 3 0 metric tons of maize per hectare and the required repayment for fertilizer seed herbicide and materials provided under the average CF scheme is 21 25 bags 50 kg each per acre or 2 6 3 0 tons per hectare which leaves almost none for home consumption or for sale Despite higher yields the costs to produce 1 ton of maize under CF schemes remain high on average higher than on maize farms without CF schemes more than twice that of several countries in Africa and more than seven times higher than that of major maize exporting countries the United States Brazil and Argentina Sustainability of these CF schemes will depend on from the firms perspective minimizing the costs to run and monitor them and from the farmers perspective developing and promoting much improved varieties and technologies that may lead to a jump in yields and gross margins to compensate for the high cost of credit

Institutions and Sustainability Volker Beckmann, Martina Padmanabhan, 2009-02-07 From the first vague idea to use Konrad Hagedorn's 60th birthday as an inspiration for taking stock of his vibrant academic contributions this joint book project has been a great pleasure for us in many ways Pursuing Hagedorn's intellectual development we have tried to reflect on the core questions of humanity according to Ernst Bloch Who are we Where do we come from and Where are we heading In this way and without knowing it Konrad Hagedorn initiated a collective action process he would have very much enjoyed if he had been allowed to take part in it But it was our aim and constant motivation to surprise him with this collection of essays in his honour Konrad Hagedorn was reared as the youngest child of a peasant family on a small farm in the remote moorland of East Frisia Germany During his childhood in the poverty ridden years after the Second World War he faced a life where humans were heavily dependent on using nature around them for their livelihoods meanwhile he learned about the fragility of the environment As a boy he tended a one room schoolhouse where his great intellectual talents were first recognised and used for co teaching his schoolmates These early teaching experiences might have laid the foundations for his later becoming a dedicated lecturer and mentor
