

Problem 3.2

Fill in the table.

This is what we write	This is what we mean	Sign of First Number	Sign of Second Number	Operation	Result
$8 + 4$					
$-3 + 8$					
$7 + (-4)$					
$-3 + (-8)$					
$2 - 7$					
$-2 - 6$					
$1 - (-8)$					
$-8 - (-2)$					

Almost certainly, the last four rows were the most problematic to determine the result. This is because subtraction combined with signed numbers offers an opportunity to showcase confused ideas, partially recalled rules and wrong calculations all at once. We will show you how to think differently about subtraction soon, but first we will look more closely at addition.

Addition of Two Signed Numbers

There are many ways to think about addition, and ideally you have many, flexible ways of understanding addition. In the problems below, we will use the concept of addition as combining quantities and finding the total.

For these problems, we can imagine a positive number represents money in our pocket (or bank account), and a negative number represents money we owe someone (a debt or a bill). The first number in the addition represents how much money we have at the beginning. The second number can represent what we are combining—it may be more money (a positive number) or a new debt. Let's see how this can help us think about addition of signed numbers.

Problem 3.3

$$3 + 2$$

We have already seen that this really means

$$(+3) + (+2)$$

The scenario we can imagine goes as follows:

- 1) I have 3 dollars in my pocket.
- 2) I then earn 2 dollars more.
- 3) Altogether, I have 5 dollars in my pocket.

This leads us to the answer,

$$3 + 2 = 5$$

Problem 3.4

$$-5 + 8$$

This means

$$(-5) + (+8)$$

Here the scenario changes:

- 1) I start out in debt 5 dollars.
- 2) I then earn 8 dollars.
- 3) After paying my 5 dollar debt with my 8 dollars, I have 3 dollars in my pocket.

The answer is

$$-5 + 8 = 3$$

daily quandaries will determine how successful they are at resolving problems and making effective decisions. It is human nature for managers to seek solutions before they even understand the nature of the problems they are trying to solve. As a result, they end up making blind decisions that change perfectly acceptable processes for incorrect reasons. The real secret to solving problems does not depend upon the number of sophisticated statistical tools that one applies. The secret to solving most problems is to keep the approach simple and uncomplicated. Many managers and employees make mistakes because they fail to do what Toyota does so effortlessly. They fail to perform the genbutsu walk during which they go to see the actual process, understand the work, ask questions, and learn. By following a structured approach and using only simple tools, most problems can be solved, effective decisions can be made, and problems prevented. The cornerstones of this book are three detailed roadmaps for solving problems, preventing problems, and making effective decisions. Each roadmap contains a step-by-step explanation on how to solve existing problems, how to prevent future problems, and how to make effective decisions. The book provides real case studies to illustrate each of the techniques presented in the book.
