In the first chapter you will learn to use several widgets in PyQt5: Display a welcome message, Use the Radio Button widget, Grouping radio buttons, Displays options in the form of a check box and Display two groups of check boxes. In chapter two you will learn to use the following topics: Using Signal Slot Editor, Copy and place text from one Line Edit widget to another, Convert data types and make a simple calculator, Use the Spin Box widget, Use scrollbars and sliders, Using the Widget List, Select a number of list items from one Widget List and display them on another Widget List widget, Add items to the Widget List, Perform operations on the Widget List, Use the Combo Box widget, Displays data selected by the user from the Calendar Widget, Creating a hotel reservation application and Display tabular data using Table Widgets. In chapter three you will learn: How to create the initial three tables project in the School database: Teacher, Class and Subject tables; How to create database configuration files; How to create a Python GUI for inserting and editing tables; How to create a Python GUI to join and query the three tables. In chapter four you will learn how to: Create a main form to connect all forms; Create a project will add three more tables to the school database: Student, Parent and Tuition tables; Create a Python GUI for inserting and editing tables; Create a Python GUI to join and query over the three tables. In chapter five you will join the six classes: Teacher, TClass, Subject, Student, Parent and Tuition and make queries over those tables. In chapter six you will create and configure database. In this chapter you will create Suspect table in crime database. This table has eleven columns: suspect_id primary key, suspect_name, birth_date, case_date, report_date, suspect_status, arrest_date, mother_name, address, telephone and photo. You will also create GUI to display, edit, insert and delete for this table. In chapter seven you will create a table with the name Feature_Extraction which has eight columns: feature_id primary key, suspect_id foreign key, feature1, feature2, feature3, feature4, feature5 and feature6. The six fields except keys will have VARBINARY MAX data type. You will also create GUI to display, edit, insert and delete for this table. In chapter eight you will create two tables: Police and Investigator. The Police table has six columns: police_id primary key, province, city, address, telephone and photo. The Investigator table has eight columns: investigator_id primary key, investigator_name, rank, birth_date, gender, address, telephone and photo. You will also create GUI to display, edit, insert and delete for both tables. In the last chapter you will create two tables: Victim and Case_File. The Victim table has nine columns: victim_id primary key, victim_name, crime_type, birth_date, crime_date, gender, address, telephone and photo. The Case_File table has seven columns: case_file_id primary key, suspect_id foreign key, police_id foreign key, investigator_id foreign key, victim_id foreign key, status and description. You will create GUI to display, edit, insert and delete for both tables.

In this project we provide you with the MySQL version of The Oracle Database Sample Schemas that provides a common platform for examples in each release of the Oracle Database. The sample

database is also a good database for practicing with SQL especially MySQL The detailed description of the database can be found on <http://luna.ext.oracle.com/server/112/e10831/diagrams.htm> insertedID0 The four schemas are a set of interlinked schemas This set of schemas provides a layered approach to complexity A simple schema Human Resources HR is useful for introducing basic topics An extension to this schema supports Oracle Internet Directory demos A second schema Order Entry OE is useful for dealing with matters of intermediate complexity Many data types are available in this schema including non scalar data types The Online Catalog OC subschema is a collection of object relational database objects built inside the OE schema The Product Media PM schema is dedicated to multimedia data types The Sales History SH schema is designed to allow for demos with large amounts of data An extension to this schema provides support for advanced analytic processing The HR schema consists of seven tables regions countries locations departments employees jobs and job_histories This book only implements HR schema since the other schemas will be implemented in the next books

Web Database Applications with PHP and MySQL Hugh E. Williams, David Lane, David John Lane, 2002 Introduces techniques for building applications that integrate large databases with web interfaces Using a three tier architecture the book focuses on the middle tier and the application logic that brings together the fundamentally different client and database tiers The authors explain the principles behind searching browsing storing user data validating user input managing user transactions and security Annotation copyrighted by Book News Inc Portland OR
