16.2 How did other scientists' work help Darwin develop his theory of natural selection?

SAMPLE ANSWER: Other scientists did research on how organisms inherited different traits.

SAMPLE ANSWER: Hutton and Lyell concluded that Earth is extremely old. Lamarck suggested that species are not fixed. Malthus reasoned larger populations would deplete resources.

16.3 What is Darwin's theory of evolution by natural selection?

SAMPLE ANSWER: Organisms that are best adapted to their environment survive longer and have more offspring.

SAMPLE ANSWER: Natural selection is the process by which organisms with variations most suited to their local environment survive and leave more offspring. Over time, beneficial traits accumulate in a population.

16.4 What are the main lines of scientific evidence that support Darwin's theory of evolution by natural selection?

Darwin's Cathedral David Sloan Wilson, 2024-05-31 A study examining the connection between religious faith and

human evolution Thoughtful and provocative Wilson turns to religion which he claims can be explained only by group selection According to Wilson a religion is the human equivalent of a pack of lions by cooperating as a group people attain benefits beyond their reach as individuals Times Literary Supplement Book of the Year One of the great intellectual battles of modern times is between evolution and religion Until now they have been considered completely irreconcilable theories of origin and existence David Sloan Wilson s *Darwin s Cathedral* takes the radical step of joining the two in the process proposing an evolutionary theory of religion that shakes both evolutionary biology and social theory at their foundations The key argues Wilson is to think of society as an organism an old idea that has received new life based on recent developments in evolutionary biology If society is an organism can we then think of morality and religion as biologically and culturally evolved adaptations that enable human groups to function as single units rather than mere collections of individuals Wilson brings a variety of evidence to bear on this question from both the biological and social sciences From Calvinism in sixteenth century Geneva to Balinese water temples from hunter gatherer societies to urban America Wilson demonstrates how religions have enabled people to achieve by collective action what they never could do alone He also includes a chapter considering forgiveness from an evolutionary perspective and concludes by discussing how all social organizations including science could benefit by incorporating elements of religion Religious believers often compare their communities to single organisms and even to insect colonies Astoundingly Wilson shows that they might be literally correct Intended for any educated reader *Darwin s Cathedral* will change forever the way we view the relations among evolution religion and human society As always Wilson writes well and clearly and in a stimulating and provocative style The book is interesting and important and there can be no higher praise I applaud the approach taken by Wilson and I urge you to read *Darwin s Cathedral* Science Wilson s book is more than just an attempt to understand religion Even to readers with no interest in either religion or science his book can serve as a model of how to discuss controversial subjects honestly New York Review of Books **Darwin's Devices** John Long,2012-04-03 A director of biorobotics research at Vassar College demonstrates how applying principles of natural selection to robot design is revolutionizing ideas in both technology and evolution identifying the potential capabilities of a practice that combines experimental science engineering and natural process 14 000 first printing Test Items and Interactive Electronic Study Guide Questions for Starr's Biology : Concept and Applications Larry G. system Science Fraud: Darwin's Plagiarism of Patrick Matthew's Theory Mike Sutton, 2023 Patrick Matthew in 1831 originated the complete theory of evolution by natural selection in his book *On Naval Timber and Arboriculture* and did so before Charles Darwin and Alfred Wallace claimed to independently replicate it in 1858 Unjustly and against the Arago convention on priority a ruling that gives origination of any science theory to the first to publish Matthew has been illicitly denied his priority on the grounds he never influenced anyone with his breakthrough Today Big Data research has uncovered Darwin's science fraud by plagiarism revealing evidence which proves beyond all reasonable doubt that he and Alfred Wallace both independently plagiarised the theory of evolution by natural selection from Patrick Matthew Books have been newly unearthed in the publication record to show that at least 30 people cited Matthew's work in published literature before 1858 and that several were known influencers of Darwin's and Wallace's work in the field Additionally several people in Darwin's and Wallace's social circles were first to be second into print using original terms coined by Matthew in his bombshell breakthrough book This book reveals all the newly unearthed data and essentially explains it alongside the deplorable treatment of Patrick Matthew in scholarly historical context Dr Mike Sutton further reveals using social science participatory observation methods and experimental results how members of the so called Darwin Industry enabled and facilitated by the deliberate publication of falsehoods and other grossly misleading editing on Wikipedia have disgracefully worked to re bury these newly unearthed facts by means of knee jerk blind sight ignorant rejection blatant and deliberate fact denial censorship persistent and serious workplace harassment obscene social media abuse poison pen emails lies mischievous misrepresentation and repeat research plagiarism **Darwin's Argument by Analogy** Roger M. Hodge, Gregory Radick, 2021-11-04 In *On the Origin of Species* 1859 Charles Darwin put forward his theory of natural selection Conventionally Darwin's argument for this theory has been understood as based on an analogy with artificial selection But there has been no consensus on how exactly this analogical argument is supposed to work and some suspicion too that analogical arguments on the whole are embarrassingly weak Drawing on new insights into the history of analogical argumentation from the ancient Greeks onward as well as on in depth studies of Darwin's public and private writings this book offers an original perspective on Darwin's argument restoring to view the intellectual traditions which Darwin took for granted in arguing as he did From this perspective come new appreciations not only of Darwin's argument but of the metaphors based on it the range of wider traditions the argument touched upon and its legacies for science after the Origin

Can Science Make Sense of Life? Sheila Jasanoff, 2019-03-05 Since the discovery of the structure of DNA and the birth of the genetic age a powerful vocabulary has emerged to express science s growing command over the matter of life Armed with knowledge of the code that governs all living things biology and biotechnology are poised to edit even rewrite the texts of life to correct nature s mistakes Yet how far should the capacity to manipulate what life is at the molecular level authorize science to define what life is for This book looks at flash points in law politics ethics and culture to argue that science s promises of perfectibility have gone too far Science may have editorial control over the material elements of life but it does not supersede the languages of sense making that have helped define human values across millennia the meanings of autonomy integrity and privacy the bonds of kinship family and society and the place of humans in nature
