

Bacteria Identification Guide

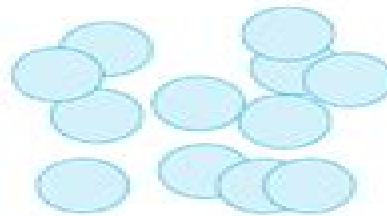

Use this guide to identify the bacteria in the Ch. 20 Review Quiz

Identification of most common bacteria is based on 2 criteria: (1) shape, and (2) Gram stain color.

- Shape:
 - Bacilli bacteria (singular- Bacillus) are elongated or rod shaped.
 - Cocci bacteria (singular- Coccus) are round or spherical.
 - Spirilli bacteria (singular- spirillum) are helical, or spiral.

- Gram staining is a process that helps identify bacteria. In this process four different solutions are applied to the bacterial cell. Depending on the amount of peptidoglycan in the cell wall, the bacteria cells will stain either purple or pink:
 - Gram positive bacteria have thick layers of peptidoglycan in their cell walls, and retain a solution called crystal violet dye during the staining process. Because of this, they appear purple.
 - Gram negative bacteria have thin layers of peptidoglycan in their cell walls, and retain a solution called safranin during the staining process. They appear pink when stained.
