Alien Reptiles and Amphibians Fred Kraus,2008-12-19

Transportation of species to areas outside their native ranges has been a feature of human culture for millennia During this time such activities have largely been viewed as beneficial or inconsequential However it has become increasingly clear that human caused introductions of alien biota are an ecological disruption whose consequences rival those of better known insults like chemical pollution habitat loss and climate change Indeed the irreversible nature of most alien species int ductions makes them less prone to correction than many other ecological problems Current reshuffling of species ranges is so great that the present era has been referred to by some as the Homogocene in an effort to reflect the unique mag tude of the changes being made These alien interlopers often cause considerable ecological and economic d age where introduced Species extinctions food web disruptions community alte tions ecosystem conversion changes in nutrient cycling fisheries collapse watershed degradation agricultural loss building damage and disease epidemics are among the destructive and frequently unpredictable ecological and economic effects that invasive alien species can inflict The magnitude of these damages c tinues to grow with virtually all environments heavily used by humans now do nated by alien species and many natural areas becoming increasingly prone to alien invasion as well Attention to this problem has increased in the past decade or so and efforts to prevent or limit further harm are gaining wider scientific and political acceptance

Eye of Newt and Toe of Frog, Adder's Fork and Lizard's Leg Marty Crump,2015-11-16 From celebrated herpetologist and science writer Marty Crump a beautifully illustrated exploration of the interlinked stories of herp folklore natural history and conservation Frogs are worshipped for bringing nourishing rains but blamed for devastating floods Turtles are admired for their wisdom and longevity but ridiculed for their sluggish and cowardly behavior Snakes are respected for their ability to heal and restore life but despised as symbols of evil Lizards are revered as beneficent guardian spirits but feared as the Devil himself In this ode to toads and snakes newts and tuatara crocodiles and tortoises herpetologist and science writer Marty Crump explores folklore across the world and throughout time From creation myths to trickster tales from associations with fertility and rebirth to fire and rain and from the use of herps in folk medicines and magic as food pets and gods to their roles in literature visual art music and dance Crump reveals both our love and hatred of amphibians and reptiles and their perceived power In a world where we keep home terrariums at the same time that we battle invasive cane toads and where public attitudes often dictate that the cute and cuddly receive conservation priority over the slimy and venomous she shows

how our complex and conflicting perceptions threaten the conservation of these ecologically vital animals Sumptuously illustrated Eye of Newt and Toe of Frog Adder s Fork and Lizard s Leg is a beautiful and enthralling brew of natural history and folklore sobering science and humor that leaves us with one irrefutable lesson love herps Warts scales and all

Restoring the Oceanic Island Ecosystem Isamu Okochi,Kazuto Kawakami,2010-03-15 Loss of biodiversity on tropical and subtropical oceanic islands is one of the most pressing conservation issues These oceanic islands are well known for their unique fauna and flora which evolved over long periods in isolation from external perturbation However the majority of these islands in the Pacific were eventually settled by Polynesians and then by Europeans by about 200 years ago only a few island groups remained untouched The Bonin Islands are one of these groups The Bonin Island group is one of the most remote in the world The islands are located 1 000 km south of Japan off the eastern fringe of Eurasia They were first discovered by the Japanese in 1670 settled by Westerners from Hawaii in 1830 and finally recognized as a Japanese territory in 1862 on condition that previous settlers would be protected and allowed to remain with full rights Because of this complicated history the Bonins have two names

to the Japanese Empire, Including Korea and Formosa, with Chapters on Manchuria, the Trans-Siberian Railway, and the Chief Ocean Routes to Japan Thomas Philip Terry, 1928 **Naturalized Reptiles and Amphibians of the World** Christopher Lever, 2003 This book describes how the various alien reptiles and amphibians now living in the wild throughout the world were first introduced how they subsequently became naturalized their present distribution and status in those countries to which they were introduced and their ecological and socio economic impact if any on the native biota and local economies Many species have had a more or less neutral impact being neither beneficial nor harmful However several have had a positive ecological or socio economic impact while some such as the cane toad have had an extremely destructive effect The criteria for inclusion of a species are that it should have been imported from its natural range to a new country by human agency either accidentally or deliberately and that it should currently be established in the wild in self maintaining and self perpetuating populations unsupported by and independent of mankind *Tetrapod Water-Land Transition: Reconstructing Soft Tissue Anatomy and Function* Julia L.
