The History of Life Michael J. Benton, 2008-11-27 There are few stories more remarkable than the evolution of life on earth. This Very Short Introduction presents a succinct guide to the key episodes in that story, from the very origins of life four billion years ago to the extraordinary diversity of species around the globe today. Beginning with an explanation of the controversies surrounding the birth of life itself, each following chapter tells of a major breakthrough that made new forms of life possible, including sex and multicellularity, hard skeletons, and the move to land. Along the way, we witness the greatest mass extinction, the first forests, the rise of modern ecosystems, and most recently, conscious humans. Introducing ideas from a range of scientific disciplines, from evolutionary biology and earth history to geochemistry, palaeontology, and systematics, Michael Benton explains how modern science pieces the evidence in this vast evolutionary puzzle together to build up an accessible and up-to-date picture of the key developments in the history of life on earth.

Sullivan, Spencer G. Lucas, 2015 EVOLUTION Michael Ruse, Joseph Travis, 2009-01-01 Spanning evolutionary science from its inception to its latest findings from discoveries and data to philosophy and history this book is the most complete authoritative and inviting one volume introduction to evolutionary biology available Clear informative and comprehensive in scope *Evolution* opens with a series of major essays dealing with the history and philosophy of evolutionary biology with major empirical and theoretical questions in the science from speciation to adaptation from paleontology to evolutionary development *evo devo* and concluding with essays on the social and political significance of evolutionary biology today A second encyclopedic section travels the spectrum of topics in evolution with concise informative and accessible entries on individuals from Aristotle and Linnaeus to Louis Leakey and Jean Lamarck from T H Huxley and E O Wilson to Joseph Felsenstein and Motoo Kimura and on subjects from altruism and amphibians to evolutionary psychology and Pildown Man to the Scopes trial and social Darwinism Readers will find the latest word on the history and philosophy of evolution the nuances of the science itself and the intricate interplay among evolutionary study religion philosophy and society Appearing at the beginning of the Darwin Year of 2009 the 200th anniversary of the birth of Charles Darwin and the 150th anniversary of the publication of the *Origin of Species* this volume is a fitting tribute to the science Darwin set in motion A New History of Life Peter Ward, Joe Kirschvink, 2015-01-01 Charles Darwin's theories first published more than 150 years ago still set the paradigm of how we understand the evolution of life but scientific advances of recent decades have radically altered that Now two pioneering scientists draw on their years of experience in paleontology biology chemistry and astrobiology to deliver an eye opening narrative using a generation's worth of insights culled from new research Writing with zest humor and clarity Ward and Kirschvink show that many of our long held beliefs about the history of life are wrong Three central themes emerge First Ward and Kirschvink argue that catastrophe shaped life's history more than all other forces combined from notorious events like the sudden extinction of dinosaurs to the recently discovered Snowball Earth and the Great Oxygenation Event Second life consists of carbon but oxygen carbon dioxide and hydrogen sulfide determined how it evolved

Third ever since Darwin we have thought of evolution in terms of species Yet it is the evolution of ecosystems from deep ocean vents to rainforests that has formed the living world as we know it Ward and Kirschvink tell a story of life on Earth that is at once fabulous and familiar And in a provocative coda they assemble discoveries from the latest cutting edge research to imagine how the history of life might unfold deep into the future *Planetary and Interstellar Processes Relevant to the Origins of Life* D.C.B. Whittet, 2013-03-14 These are exciting times for exobiology The ubiquity of organic molecules in interstellar clouds comets and asteroids strongly supports a cosmic perspective on the origin of life Data from both ground based telescopes and the recently launched Infrared Space Observatory are providing new insight into the complexity of carbon based chemistry beyond the Earth Meteorites give us solid evidence for extraterrestrial amino acids and putative fossil evidence for life in a 3 6 billion year old Martian meteorite hints that life in our system might not be the sole prerogative of the Earth Giant planets have now been discovered orbiting other stars and although such planets seem unlikely to be habitable themselves their existence strongly suggests what many astronomers have long believed that planetary systems are commonplace All these topics are reviewed in this volume by active researchers The level is appropriate for graduate students in astronomy biology chemistry earth sciences physics and related disciplines It will also provide a valuable source of reference for active researchers in these fields *Campbell Biology Australian and New Zealand Edition* Jane B.
