Monitoring Continuous Phenomena Peter Lorkowski,2021-06-24 Monitoring continuous phenomena by stationary and mobile sensors has become a common due to the improvement in hardware and communication infrastructure and decrease in its cost Sensor data is now available in near real time via web interfaces and in machine readable form facilitated by paradigms like the Internet of Things IoT There are still some obstacles in the usability of the data since the positions in space and time of observation and the positions of interest usually do not coincide Interpolation is the technique to fill such gaps and there are manifold methods to perform it To actually operate a monitoring system there are problems like unambiguous identification of interpolation method and associated parameters appropriate interface to store observations and retrieve interpolated data continuous update of the interpolation model for real time monitoring compression and progressive retrieval of observational data and critical states definition and notification by using aggregation of values This book proposes a general system architecture that addresses these problems It is not confined to details about particular interpolation methods but rather takes a holistic view on the problem of monitoring State of the art technologies like geostatistics sensor web enablement and field data types are introduced and applied in order to provide a viable toolset for the problem domain The focus is on the overall organization of the monitoring and the architectural design of the software system and the associated simulation framework that is used to systematically evaluate different monitoring approaches The whole cycle of a monitoring entailing observation interpolation discretization storage retrieval and notification is covered Concrete solutions for several common problems in this context are provided *Enterprise Information Systems* Joaquim Filipe,José Cordeiro,2011-03-14 This book contains substantially extended and revised versions of the best papers from the 12th International Conference on Enterprise Information Systems ICEIS 2010 held in Funchal Madeira Portugal June 8 12 2010 Two invited papers are presented together with 39 contributions which were carefully reviewed and selected from 62

Fu, Steven I. Marcus, 2013-02-26 Markov decision process MDP models are widely used for modeling sequential decision making problems that arise in engineering economics computer science and the social sciences Many real world problems modeled by MDPs have huge state and or action spaces giving an opening to the curse of dimensionality and so making practical solution of the resulting models intractable In other cases the system of interest is too complex to allow explicit specification of some of the MDP model parameters but simulation samples are readily available e g for random transitions and costs For these settings various sampling and population based algorithms have been developed to overcome the difficulties of computing an optimal solution in terms of a

policy and or value function Specific approaches include adaptive sampling evolutionary policy iteration evolutionary random policy search and model reference adaptive search This substantially enlarged new edition reflects the latest developments in novel algorithms and their underpinning theories and presents an updated account of the topics that have emerged since the publication of the first edition Includes innovative material on MDPs both in constrained settings and with uncertain transition properties game theoretic method for solving MDPs theories for developing roll out based algorithms and details of approximation stochastic annealing a population based on line simulation based algorithm The self contained approach of this book will appeal not only to researchers in MDPs stochastic modeling and control and simulation but will be a valuable source of tuition and reference for students of control and operations research

Verification and Validation in Scientific Computing William L. Oberkamp, Christopher J. Roy, 2010-10-14 Advances in scientific computing have made modelling and simulation an important part of the decision making process in engineering science and public policy This book provides a comprehensive and systematic development of the basic concepts principles and procedures for verification and validation of models and simulations The emphasis is placed on models that are described by partial differential and integral equations and the simulations that result from their numerical solution The methods described can be applied to a wide range of technical fields from the physical sciences engineering and technology and industry through to environmental regulations and safety product and plant safety financial investing and governmental regulations This book will be genuinely welcomed by researchers practitioners and decision makers in a broad range of fields who seek to improve the credibility and reliability of simulation results It will also be appropriate either for university courses or for independent study

Discrete Event Simulations Aitor Goti, 2010-08-18 Considered by many authors as a technique for modelling stochastic dynamic and discretely evolving systems this technique has gained widespread acceptance among the practitioners who want to represent and improve complex systems Since DES is a technique applied in incredibly different areas this book reflects many different points of view about DES thus all authors describe how it is understood and applied within their context of work providing an extensive understanding of what DES is It can be said that the name of the book itself reflects the plurality that these points of view represent The book embraces a number of topics covering theory methods and applications to a wide range of sectors and problem areas that have been categorised into five groups As well as the previously explained variety of points of view concerning DES there is one additional thing to remark about this book its richness when talking about actual data or actual data based analysis When most academic areas are lacking application cases roughly the half part of the chapters included in this book deal with actual problems or at least are based on actual data Thus the editor firmly believes that this book will be interesting for both beginners and practitioners in

the area of DES **Resource Efficiency in Manufacturing Value Chains** Stefan Alexander Blume,2020-11-04 This book presents a concept for fostering resource efficient manufacturing The protection of our environment demands a more responsible use of natural resources and a higher degree of transparency along manufacturing value chains will be required in order to make significant advances in this context Industrial decision makers must be provided with adequate methods and tools to simultaneously and systematically pursue technical economic and environmental targets Building on established and complementary methods such as material and energy flow analysis MEFA value stream mapping VSM life cycle costing LCC and environmental life cycle assessment LCA this book introduces a concept that allows a holistic modeling and multi dimensional performance assessment of manufacturing systems on different levels from processes up to entire value chains and product life cycles It also demonstrates the application of the concept using two case studies from the metal mechanic industry
