electronics *Perceiving and Acting in the Real World: From Neural Activity to Behavior* Simona Monaco, Gavin
Buckingham, Irene Sperandio, J. Douglas Crawford, 2016-12-07 One remarkable ability of the human brain is to process large
amounts of information about our surroundings to allow us to interact effectively with them In everyday life the most
common way to interact with objects is by reaching grasping lifting and manipulating them Although these may sound like
simple tasks the perceptual properties of the target object such as its location size shape and orientation all need to be
processed in order to set the movement parameters that allow an accurate reach to grasp to lift movement Several brain
areas work in concert to process this outstanding amount of visual information and drive the execution of a motor plan in just
a few hundred milliseconds How are these processes orchestrated In developing this type of comprehensive knowledge about
the interactions between objects perception and goal directed actions we have a window into the mechanisms underlying the
functioning of the visuo motor system With this research topic we aim to further understand the neural mechanisms that

mediate our interactions with the world Therefore we particularly encourage submission of papers that attempt to relate such findings to real world situations by investigating behavioural and neural correlates of information processing related to eye hand coordination and visually guided actions including reaching grasping and lifting movements This topic welcomes submissions of original research using any relevant techniques and methods from behavioural kinematics kinetics to neuroimaging and transcranial magnetic stimulation TMS as well as neuropsychological studies [Proceedings](#) ,1996
