## VENTRICULAR RHYTHMS

Rhythm	Rate	P wave	P-R interval	QRS
That of underlying rhythm	Underlying rhythm	That of underlying rhythm	That of underlying rhythm	Wide >0.12s

ventricles are depolarized at the same time, resulting in a QRS less than 0.12s. If one branch becomes blocked, the other will depolarize first, and the impulse moves down the ventricular septum and depolarizes the blocked one – resulting in a wide QRS

Timing between left and right BBB requires a 12-lead ECG. If the QRS complex is normally opposite of the majority deflection of the QRS complex, a bundle branch block is required.

Rhythm	Rate	P wave	P-R interval	QRS
Regular, irregular with the PVC	That of underlying rhythm	No p wave with the PVC	Not measurable	Premature, wide abnormal >0.12s

originating in an ectopic site in the ventricles = wide QRS. PVCs is considered a rhythm – and the rate will define that rhythm. Focal = PVCs that have same (focal) or varying (multifocal) morphologies from the same site. Very common in healthy hearts or older individuals with heart disease. Causes include MI, hypoxia, mitral valve prolapse, cardiac contusion, myocarditis, alcohol, cocaine, caffeine, digoxin, tricyclic antidepressants, electrolyte imbalances (hypokalemia, hypomagnesemia), surgery/catheterization.

D'Alonzo, 2010-06-27 Critical care medicine is a dynamic and exciting arena where complex pathophysiologic states require extensive knowledge and up to date clinical information. An extensive knowledge of basic pathophysiology as well as awareness of the appropriate diagnostic tests and treatments that are used to optimize care in the critically ill is essential. Since our first edition 7 years ago new information crucial to the care and understanding of the critically ill patient has rapidly accumulated. Because this knowledge base crosses many different disciplines a comprehensive multidisciplinary approach presenting the information is essential similar to the multidisciplinary approach that is used to care for the critically ill patient. We have strived to provide this content in an easily digestible format that uses a variety of teaching tools to facilitate understanding of the presented concepts and to enhance information retention. To meet the demand to provide comprehensive and diverse education in order to understand the pathogenesis and optimum care of a variety of critical illnesses we have substantially revised the prior topics in the first edition with updated information. We have also markedly expanded the number of topics covered to include acute lung injury and the acute respiratory distress syndrome an expanded discussion of the physiology and operation of mechanical ventilation obstetrical care in the ICU neurosurgical emergencies acute coronary syndromes cardiac arrhythmias role of whole body rehabilitation in the ICU ethical conduct of human research in the ICU and nursing care of the ICU patient **PCCN®**
