

1.5 Summary

The challenge to IT professionals today is to efficiently develop and deploy distributed applications for use on both corporate intranets and over the Internet. Companies that can do this effectively will gain strategic advantages in the information economy.

The Java 2 Platform, Enterprise Edition is a standard set of Java technologies that streamline the development, deployment, and management of enterprise applications. The J2EE platform is functionally complete in the sense that it is possible to develop a large class of enterprise applications using only J2EE technologies. Applying these services on the J2EE platform will allow existing J2EE compatible servers. The J2EE platform provides a number of features for organizations developing web applications, including a simplified development model, industry-strength scalability, support for existing information systems, options to migrate, tools, and components, and a simple, flexible security model.

By providing the ability to deploy component-oriented enterprise applications across multiple computers, there is a platform-neutral means, the J2EE platform can give the emerging enterprise a significant and unique competitive edge.
