King,2012-12-06 Biotechnology in its many guises has developed very considerably over the last few years We now feel that it is appropriate for the publication of a series of books that discuss the technical aspects of biotechnology specifically as applied to foods and in particular concentrating on new and emerging techniques processes and products Food is without doubt one of the oldest bioindustries however some of the new areas of biotechnology such as diagnostic and health care applications are likely to mature much faster than applications in the food industry Eventually however biotechnology must have a very great impact on a wide scale in the food industry simply because of the size and diversity of the industry and because most food products are substantially natural in origin and are therefore very suitable for processing by biocatalysts Some of the ways in which the food industry is likely to be affected by developments in biotechnology include the following The modification of food components to give products with new and or improved properties for instance high fructose corn syrups and by modifying the functional properties of proteins New methods of assaying food constituents such as immobilized enzyme sensors New processes for the production of foods and food components for instance the use of plant cell cultures for the production of flavours Many of these topics will be described in detail in this series of books

Bioprocessing Owen P. Ward,2012-12-06 Methods for processing of biological materials into useful products represent essential core manufacturing activities of the food chemical and pharmaceutical industries On the one hand the techniques involved include well established process engineering methodologies such as mixing heat transfer size modification and a variety of separation and fermentation procedures In addition new bioprocessing practices arising from the exciting recent advances in biotechnology including innovative fermentation cell culture and enzyme based operations are rapidly extending the frontiers of bioprocessing These developments are resulting in the introduction to the market place of an awesome range of novel biological products having unique applications Indeed the United States Office of Technology Assessment has concluded that competitive advantage in areas related to biotechnology may depend as much on developments in bioprocess engineering as on innovations in genetics immunology and other areas of basic science Advances in analytical instrumentation computerization and process automation are playing an important role in process control and optimization and in the maintenance of product quality and consistency characteristics Bioprocessing represents the industrial practice of biotechnology and is multidisciplinary in nature integrating the biological chemical and engineering sciences This book

discusses the individual unit operations involved and describes a wide variety of important industrial bioprocesses I am very grateful to Sanjay Thakur who assisted me in the collection of material for this book
