**Foundations and Novel Approaches in Data Mining** Tsau Young Lin, Setsuo Ohsuga, Churn-Jung Liao, Xiaohua Hu, 2005-11-03 Data mining has become a popular research topic in recent years for the treatment of the data rich and information poor syndrome Currently application oriented engineers are only concerned with their immediate problems which results in an ad hoc method of problem solving Researchers on the other hand lack an understanding of the practical issues of data mining for real world problems and often concentrate on issues that are of no significance to the practitioners In this volume we hope to remedy problems by 1 presenting a theoretical foundation of data mining and 2 providing important new directions for data mining research A set of well respected data mining theoreticians were invited to present their views on the fundamental science of data mining We have also called on researchers with practical data mining experiences to present new important data mining topics *Feature Engineering for Machine Learning and Data Analytics* Guozhu Dong, Huan Liu, 2018-03-14 Feature engineering plays a vital role in big data analytics Machine learning and data mining algorithms cannot work without data Little can be achieved if there are few features to represent the underlying data objects and the quality of results of those algorithms largely depends on the quality of the available features Feature Engineering for Machine Learning and Data Analytics provides a comprehensive introduction to feature engineering including feature generation feature extraction feature transformation feature selection and feature analysis and evaluation The book presents key concepts methods examples and applications as well as chapters on feature engineering for major data types such as texts images sequences time series graphs streaming data software engineering data Twitter data and social media data It also contains generic feature generation approaches as well as methods for generating tried and tested hand crafted domain specific features The first chapter defines the concepts of features and feature engineering offers an overview of the book and provides pointers to topics not covered in this book The next six chapters are devoted to feature engineering including feature generation for specific data types The subsequent four chapters cover generic approaches for feature engineering namely feature selection feature transformation based feature engineering deep learning based feature engineering and pattern based feature generation and engineering The last three chapters discuss feature engineering for social bot detection software management and Twitter based applications respectively This book can be used as a reference for data analysts big data scientists data preprocessing workers project managers project developers prediction modelers professors researchers graduate students and upper level undergraduate students It can also be used as the primary text for courses on feature engineering or as a supplement for courses on machine learning data mining and big data analytics

M. Coetzee and the Ethics of Reading Derek Attridge,2021-04-10 Nobel Prize winning novelist J M Coetzee is one of the most widely taught contemporary writers but also one of the most elusive Many critics who have addressed his work have devoted themselves to rendering it more accessible and acceptable often playing down the features that discomfort and perplex his readers Yet it is just these features Derek Attridge argues that give Coetzee's work its haunting power and offer its greatest rewards Attridge does justice to this power and these rewards in a study that serves as an introduction for readers new to Coetzee and a stimulus for thought for those who know his work well Without overlooking the South African dimension of his fiction Attridge treats Coetzee as a writer who raises questions of central importance to current debates both within literary studies and more widely in the ethical arena Implicit throughout the book is Attridge's view that literature more than philosophy politics or even religion does singular justice to

our ethical impulses and acts Attridge follows Coetzee's lead in exploring a number of issues such as interpretation and literary judgment responsibility to the other trust and betrayal artistic commitment confession and the problematic idea of truth to the self
