Integrated Urban Models Volume 2: New Research and Applications of Optimization and Dynamics (Routledge Revivals) Stephen H. Putman, 2014-04-04 Following on from *Integrated Models Volume 1 Policy Analysis of Transportation and Land Use* Routledge Library Editions 2006 this book bridges the gap between the scholars and the practitioners of transportation and land use modelling First published in 1991 chapters discuss model calibration and model solution problems describe a series of numerical and policy analyses and propose potential directions for location and land use research This reissue will be of particular value to undergraduate and postgraduate geography students with an interest in integrated urban modelling in particular the research conducted in the field over the past two decades

Urban Dynamics (Routledge Revivals) C.S. Bertuglia, 2013-12-19 Originally published in 1990 this work analyses the use of contemporary computer models to simulate urban systems The work deals with the two significant traditions of model building firstly the building of integrated models

following the seminal research of Lowry first published in 1964 but with relatively simple submodels and secondly intensive research on particular submodels with a variety of techniques This volume constructs a model building exercise which integrates the two traditions an integrated model in a modular form with alternative components using the most advanced submodels The book concludes with a presentation of an example of an operational model of this type **Entropy in Urban and Regional Modelling (Routledge Revivals)** Alan Wilson,2013-01-11 First published in 1970 this groundbreaking investigation into Entropy in Urban and Regional Modelling provides an extensive and detailed insight into the entropy maximising method in the development of a whole class of urban and regional models The book has its origins in work being carried out by the author in 1966 when he realised that the well known gravity model could be derived on the basis of an analogy with statistical rather than Newtonian mechanics Subsequent investigation demonstrated that the entropy maximising method stems from an even higher level of generality and the beginning of the book is devoted to an account of its importance and use as a general modelling tool This reissue will be welcomed by a range of students and professionals from fields as diverse as urban and regional studies economics geography planning civil engineering mathematics and statistics **Sustainable Aquaculture** Faisal I. Hai,Chettiyappan Visvanathan,Ramaraj Boopathy,2018-03-02 This book is about important relevant recent research topics in sustainable aquaculture practices A critical assessment of the sustainable fishing methods and the aspect of sustainable aquaculture feed is presented in this volume A special focus has been given to socio economic and environmental assessment of aquaculture practices and analysis of carbon footprint under an intensive aquaculture regime Aquaponics as a niche for sustainable modern aquaculture has been highlighted The effect of use of pharmaceuticals to prevent fish disease on the surrounding marine environment is an emerging area of concern and a critical discussion on this aspect is included in the book The spread of organic waste and nutrients released by fish farms to natural water bodies has raised considerable concerns Therefore the methods to prevent their dispersion and removal treatment have been comprehensively covered in this book This book is an essential read for academician researchers and policy makers in the field of aquaculture **Physical and Information Models in Geography (Routledge Revivals)** Richard Chorley,Peter Haggett,2013-10-14 First published in 1967 this book explores the theme of geographical generalization or model building It is composed of eight of the chapters from the original Models in Geography published in 1967 The first chapter broadly outlines geographical generalization and examines the nature and function of generalized statements ranging from conceptual models to scale models in a geographical context The following chapter deals with model theory in a wider scientific framework and the rest of the book discusses models of physical systems and information models The book considers model type generalizations that are applied in the three fields of geomorphology meteorology and climatology and hydrology before focusing on the transference of information and ideas in geography This text represents a robustly anti idiographic statement of modern work in one of the major branches of geography **Writing Worlds** Trevor J.

Barnes, James S. Duncan, 2013-12-19 *Writing Worlds* represents the first systematic attempt to apply poststructuralist ideas to landscape representation. Landscape, city, countryside and wilderness is explored through the discourse of economics, geopolitics and urban planning, travellers' descriptions, propaganda maps, cartography and geometry, poetry and painting. The book aims to deconstruct geographical representation in order to explore the dynamics of power in the way we see the world.

The Tyranny of the Discrete John Duncan Marshall, 1997. This book argues that in the work of trained historians as well as amateurs, English local history is weakened by a pervasive antiquarianism, an obsession with detail as opposed to substance. It examines such antiquarianism and shows it to be educationally damaging and wasteful of resources. The author examines the development of the main concepts in local history and shows the importance of comparative and regional study pursued through an ongoing and developing debate. He condemns the use of local history merely as a quarry and suggests that local residents, societies and followers of family history can be brought together in the study of a new form of people's history, one which reflects the life experiences of the people concerned and only then moves back into other, less familiar periods.

Mirror of the World Meg Roland, 2021-07-28. In the late fifteenth century the production of print editions of Claudius Ptolemy's second-century Geography sparked one of the most significant intellectual developments of the era: the production of mathematically based, north-oriented maps. The production of world maps in England, however, was notably absent during this Ptolemaic revival. As a result, the impact of Ptolemy's text on English geographical thought has been obscured and minimized, with scholars speculating a possible English indifference to or isolation from European geographic developments. Tracing English geographical thought through the material culture of literary and popular texts, this study provides evidence for the reception and transmission of Ptolemaic-based geography in England during a critical period of geographic innovation and synthesis, one that laid the foundation for modern geographical representation. With evidence from prose romance, book illustration, theatrical performance, cosmological ceilings and almanacs, *Mirror of the World* proposes a new interdisciplinary literary and cartographic history of the influence of Ptolemaic geography in England, one that reveals the lively integration of geographic concepts through narrative and non-cartographic visual forms.

Integrated Urban Models Stephen H. Putman, 2007. **Planning for Small Town Change** Neil Powe, Trevor Hart, 2017-02-17. Change is inevitable in all communities; they both grow and decline. Planning is a means by which we have sought to manage this change. It has not always succeeded in providing the types of settlements and environments which many residents and others want, either because it is operating with the wrong policies or because it is failing to ensure that the right policies are effectively implemented. These failings have opened planning to criticism by a dominant neoliberal orthodoxy which shapes an increasingly difficult environment in which planning has to operate. *Planning for Small Town Change* builds on an underexploited selection of international research and the authors' English case studies to consider the efficacy of planning for change. Drawing on insightful small-town experiences, three themes emerge: understanding and conceptualising change.

appreciating the potential within place and the mechanisms for planning and delivery The research draws on many examples of how key actors have made a significant difference to specific places and provides important insights into how the planning process can be better matched to the long term and complex challenges faced Whilst small town experiences are often neglected they are found to be particularly insightful in understanding the potential roles of local communities and the importance of place quality when planning for change **British Paperbacks in Print** ,1983 Independence Movements and Their Aftermath Jon B. Alterman,Will Todman,2018-11-23 This volume explores the varied outcomes that self determination movements around the world have achieved and in particular seeks to understand what factors promote better outcomes and what factors promote worse ones Rather than focusing on the metric of achieving independence the project evaluates the quality of societies after independence including such elements as economic strength and political resilience and it analyzes what factors contribute to different outcomes The study finds that the single most determinative factor in the success of any independence movement is frequently beyond the control of such a movement often relating to the global and historical contexts in which the movement finds itself However a whole host of factors are within the control of such a movement but movements do not always seek to act on many of them Activists become so convinced in the justness of the independence cause that they do not focus on actions that would contribute to greater success after independence

Strategic Planning for Urban Transportation Guido Noto,2020-03-12 This book focuses on the adoption of a Dynamic Performance Management DPM approach to support the planning and management of urban transportation systems DPM allows one to embrace a dynamic and systemic perspective and as a result to frame the contribution of different stakeholders in terms of outcome based performance at an inter institutional level The discussed DPM approach allows one to focus on the causal relationships and feedback processes that characterize urban transportation systems governance Particularly through the adoption of such an approach it is possible to identify outcome based performance measures that help to monitor and drive the governance network toward the creation of public value for the reference communities *Strategic Planning for Urban Transportation A Dynamic Performance Management Approach* begins with an examination of urban transportation highlighting the main criticalities and future challenges of managing it Next the book examines the governance of urban transportation including how to identify and engage stakeholders Finally the book introduces the main application of DPM and system dynamics to urban areas with specific regards to transportation The framework is outlined and a case study is provided as a practical example of how to apply the model This book should be useful to urban transportation decision makers at both the managerial and political level *American Book Publishing Record* ,2007 **The British National**
