Dent, 1995-07-31 This important book provides a practical guide to the principles and practice of developing an integrated pest management IPM programme Integrated Pest Management answers the question how do you devise develop and implement a practical IPM system which will fully meet the real needs of farmers The term pest in this book is used in its broadest sense and includes insects pathogens weeds nematodes etc The book commences by outlining the basic principles which underlie pest control crop husbandry socio economics population ecology and population genetics and reviews the control measures available and their use in IPM systems Subsequent chapters cover the techniques and approaches used in defining a pest problem programme planning and management systems analysis experimental paradigms and implementation of IPM systems The final section of the book contains four chapters giving examples of IPM in different cropping systems contributed by invited specialists and outlining four different

perspectives Integrated Pest Management will be of great use to agricultural and plant scientists entomologists arachnologists and nematologists and all those studying crop protection particularly at MSc level and above It will be particularly useful for and should find a place on the shelves of all personnel within the agrochemical industry universities and research establishments working in this subject area and as a reference in libraries for students and professionals alike Principles and Practice of Integrated Pest Management Grayson C. Brown, 2005-04-04 *Introduction to Integrated Pest Management* M.L. Flint, R. van den Bosch, 2012-12-06 Integrated control of pests was practiced early in this century well before anyone thought to call it integrated control or still later integrated pest management IPM which is the subject of this book by Mary Louise Flint and the late Robert van den Bosch USDA entomologists W D Hunter and B R Coad recommended the same principles in 1923 for example for the control of boll weevil on cotton in the United States In that program selected pest tolerant varieties of cotton and residue destruction were the primary means of control with insecticides considered supplementary and to be used only when a measured incidence of weevil damage occurred Likewise plant pathologists had also developed disease management programs incorporating varietal selection and cultural procedures along with minimal use of the early fungicides such as Bordeaux mixture These and other methods were practiced well before modern chemical control technology had developed Use of chemical pesticides expanded greatly in this century at first slowly and then following the launching of DDT as a broadly successful insecticide with rapidly increasing momentum In 1979 the President's Council on Environmental Quality reported that production of synthetic organic pesticides had increased from less than half a million pounds in 1951 to about 1.4 billion pounds or about 3000 times as much in 1977 Globalizing Integrated Pest Management George W. Norton, E. A. Heinrichs, Gregory C. Luther, Michael E. Irwin, 2005-02-28 As food demand has grown worldwide agricultural production has intensified with a concomitant expansion in pesticide use Concerns over pesticide induced health and environmental problems increased pest resistance to pesticides and continued losses due to pests have stimulated the search for alternative pest management solutions As a result integrated pest management IPM approaches have been developed and applied that rely on genetic cultural biological and information intensive pest management alternatives This book presents and critiques the participatory approaches that can be used to globalize IPM It describes the development deployment and evaluation of participatory IPM All the chapters include perspectives from both the US and developing country scientists who are on the front lines of IPM generation and diffusion The book is unique amongst IPM books in that it stresses policy analysis social and economic impact assessment multidisciplinary field research and technology transfer mechanisms **Integrated Pest Management** Dharam P.
