Integrated Sustainable Design of Buildings Paul Appleby, 2011 First Published in 2010 Routledge is an imprint of Taylor Francis an informa company *Integrated Sustainable Design of Buildings* Paul Appleby, 2012-10-12 *Integrated Sustainable Design of Buildings* aims to provide a guide to members of design and masterplanning teams on how to deliver sustainable development and buildings cost effectively meeting current and emerging UK and international statutory and planning requirements Using a series of case histories and examples from the author's ten years of providing sustainability advisory services the book sets out a clear and understandable strategy that deals with all aspects of sustainable design and construction and the implications for delivery costs saleability and long term operation The extensive scope includes all aspects of environmental social and economic sustainability including strategies to reduce carbon emissions and the impact of climate change *Integrated Sustainable Design of Buildings* appeared in the Cambridge Top 40 Sustainability Books of 2010

Integrated Design and Delivery Solutions Matthijs Prins, Robert Owen, 2010-12-07 *Integrated Design and Delivery Solutions* IDDS represent a significant new research trajectory in the integration of architecture and construction through the rapid adoption of new processes This book examines the ways in which collaboration and new methods of contracting and procurement enhance skills and improve processes in terms of lean and sustainable construction Based on high quality research and practice based examples that provide key insights into IDDS and its future potential this book surveys the technologies that are being employed to create more sustainable buildings with added value for clients stakeholders and society as whole *Sustainable Retrofitting of Commercial Buildings* Simon Burton, 2014-10-03 Whilst sustainability is already an important driver in the new building sector this book explores how those involved in refurbishment of commercial building are moving this agenda forward It includes chapters by developers surveyors cost consultants architects building physicists and other players on the role they each can play in enabling refurbishment to be commercially environmentally and socially sustainable Case studies from northern climates show real examples of different building types ages and uses and will demonstrate what action has been taken to create more sustainable buildings The chapters raise and discuss all the relevant issues that need to be considered in retrofitting decision making Changing standards planning process management financing technical issues site organisation commissioning and subsequent building management are all considered The book demonstrates that buildings can be made comfortable to occupy easy to manage and low in energy demand and environmental impact **Sustainable Retrofit and Facilities Management** Paul Appleby, 2013 Explores the relationship between the refurbishment of existing buildings facility management and the wider community infrastructure **Designing Zero Carbon Buildings Using Dynamic Simulation Methods** Ljubomir Jankovic, 2017-06-23 In addition to the application of fundamental principles that lead to a structured method for zero carbon design of buildings this considerably expanded second edition includes new advanced topics on multi objective optimisation reverse modelling reduction of the simulation

performance gap predictive control nature inspired emergent simulation leading to sketches that become alive and an alternative economics for achieving the sustainability paradigm The book features student design work from a Master s programme run by the author and their design speculation for a human settlement on Mars Tasks for simple simulation experiments are available for the majority of topics providing the material for classroom exercise and giving the reader an easy introduction into the field Extended new case studies of zero carbon buildings are featured in the book including schemes from Japan China Germany Denmark and the UK and provide the reader with an enhanced design toolbox to stimulate their own design thinking *Routledge Handbook of Sustainable Real Estate* Sara Wilkinson,Tim Dixon,Norm Miller,Sarah Sayce,2018-03-21 With the built environment contributing almost half of global greenhouse emissions there is a pressing need for the property and real estate discipline to thoroughly investigate sustainability concerns The Routledge Handbook of Sustainable Real Estate brings together the latest research of leading academics globally demonstrating the nature and extent of the impact as well as suggesting means of mitigating humankind s impact and building resilience Four sections examine the different aspects of sustainable real estate governance and policy valuation investment and finance management redevelopment and adaptation Covering all land uses from residential to commercial retail and industrial the Routledge Handbook of Sustainable Real Estate is an exciting mixture of received wisdom and emerging ideas and approaches from both the developed and developing world Academics upper level students and researchers will find this book an essential guide to the very best of sustainable real estate research *Architecture and Energy* William Braham,Daniel Willis,2013-07-18 Does energy consumption influence architectural style Should more energy efficient buildings look different Can that look be used to explain or enhance their performance Architecture and Energy provides architects and architectural theorists with more durable arguments for environmental design decisions arguments addressing three different scales or aspects of contemporary construction By drawing together essays from the leading experts in the field this book engages with crucial issues in sustainable design such as The larger role of energy in forming the cultural and economic systems in which architecture is conceived constructed and evaluated The different measures and meanings of energy performance and how those measures are realized in buildings The specific ways in which energy use translates into the visible aspects of architectural style Drawing on research from the UK US Europe and Asia the book outlines the problems surrounding energy and architecture and provides the reader with a considered overview of this important topic *Sustainability in Energy and Buildings* John Littlewood,Robert J. Howlett,Alfonso Capozzoli,Lakhmi C. Jain,2019-10-26 This volume contains the proceedings of the 11th KES International Conference on Sustainability and Energy in Buildings 2019 SEB19 held in Budapest 4th 5th July 2019 organised by KES International in partnership with Cardiff Metropolitan University Wales UK SEB 19 invited contributions on a range of topics related to sustainable buildings and explored innovative themes regarding sustainable energy systems The aim of the conference was to bring together

researchers and government and industry professionals to discuss the future of energy in buildings neighbourhoods and cities from a theoretical practical implementation and simulation perspective The conference formed an exciting chance to present interact and learn about the latest research and practical developments on the subject The conference attracted submissions from around the world Submissions for the Full Paper Track were subjected to a blind peer review process Only the best of these were selected for presentation at the conference and publication in these proceedings It is intended that this volume provides a useful and informative snapshot of recent research developments in the important and vibrant area of Sustainability in Energy and Buildings

Sustainable Building Adaptation Sara J. Wilkinson, Hilde Remøy, Craig Langston, 2014-04-07 How to adapt existing building stock is a problem being addressed by local and state governments worldwide In most developed countries we now spend more on building adaptation than on new construction and there is an urgent need for greater knowledge and awareness of what happens to commercial buildings over time Sustainable Building Adaptation innovations in decision making is a significant contribution to understanding best practice in sustainable adaptations to existing commercial buildings by offering new knowledge based theoretical and practical insights Models used are grounded in results of case studies conducted within three collaborative construction project team settings in Australia and the Netherlands and exemplars are drawn from the Americas Asia Japan Korea and Europe to demonstrate the application of the knowledge more broadly Results clearly demonstrate that the new models can assist with informed decision making in adaptation that challenges some of the prevailing solutions based on empirical approaches and which do not accommodate the sustainability dimension The emphasis is on demonstrating how the new knowledge can be applied by practitioners to deliver professionally relevant outcomes The book offers guidance towards a balanced approach that incorporates sustainable and optimal approaches for effective management of sustainable adaptation of existing commercial buildings

Creating Low Carbon Cities Shobhakar Dhakal, Matthias Ruth, 2017-03-10 This book addresses key topics in the current deliberations and debates on low carbon cities that are underway globally Contributions by experts from around the world focus on the key factors required for creating low carbon cities These include appropriate infrastructure ensuring co benefits of climate actions making best use of knowledge and information proper accounting of emissions and social factors such as behavioral change Readers will gain a better understanding of these drivers and explore potential transformation pathways for cities Particular emphasis is given to the current situation of energy consumption and greenhouse gas GHG emissions at the urban level stressing the complexity of measuring GHG emissions from cities Chapters also shed new light on the long term transformation pathways towards low carbon This book discusses key challenges and opportunities in all these domains to aid in creating low carbon cities making it of value to policy makers researchers in academia and consultants working on climate change and energy issues The low carbon cities agenda is of bold ambition and demands rapid societal transformation This book provides invaluable information and analysis on how the goals of this agenda can be

achieved and what will be the significant obstacles in the way The content in the book goes below the surface to reveal on the ground economic engineering and equity issues that are at the heart of the Paris Climate Agreement and the ensuing policy debates In this way Creating Low Carbon Cities serves as a critical scholarly benchmark and as a toolkit for further action William Solecki Professor Institute for Sustainable Cities City University of New York Creating Low Carbon Cities provides a refreshingly critical approach to low carbon urban development what has been achieved so far and the challenges ahead It will be an important data driven resource for local leaders sustainability practitioners and urban planners Ms Monika Zimmermann Deputy Secretary General ICLEI Local Governments for Sustainability Low Carbon Cities Steffen Lehmann,2014-09-15 Low Carbon Cities is a book for practitioners students and scholars in architecture urban planning and design It features essays on ecologically sustainable cities by leading exponents of urban sustainability case studies of the new directions low carbon cities might take and investigations of how we can mitigate urban heat stress in our cities microclimates The book explores the underlying dimensions of how existing cities can be transformed into low carbon urban systems and describes the design of low carbon cities in theory and practice It considers the connections between low carbon cities and sustainable design social and individual values public space housing affordability public transport and urban microclimates Given the rapid urbanisation underway globally and the need for all our cities to operate more sustainably we need to think about how spatial planning and design can help transform urban systems to create low carbon cities and this book provides key insights Sustainable Building and Built Environments to Mitigate Climate Change in the Tropics Tri Harso Karyono,Robert Vale,Brenda Vale,2017-02-21 This book offers a selection of the best papers presented during the International conference on Mitigating and Adapting Built Environments for Climate Change in the Tropics held at Tanri Abeng University TAU Jakarta Indonesia March 2015 The book is divided into four main parts The first part deals with the general issue of climate change the cause and the ways to mitigate and to adapt the built environment for climate change in a number of countries Part 2 deals with the conceptual ways to mitigate building for climate change The ways to reduce cooling energy in tropical buildings by means of passive design Part 3 offers papers that examine the way to overcome disasters in the city caused by climate change The final part deals with the role of plants in mitigating and adapting built environments to climate change the use of plants trees and bushes to directly and indirectly reduce carbon emissions are discussed **Low Energy Low Carbon Architecture** Khaled Al-Sallal,2016-05-05 Providing a complete and in depth overview of the available knowledge in the area of low energy and low carbon architecture The scope of this edited book includes several important topics ranging from chapters giving a broad view of the progressing models in ecologically responsible environments to other chapters focussing on recent advances in design strategies and building technologies in low energy heating cooling daylighting materials and building sustainable systems The book will give the readers insight to the future of low energy and low carbon architecture in the beyond green era and discussed in the broader context of the

progressing theories of regenerative design **Real Property in Australia** Michael J. Hefferan, 2020-08-17 Real property in the form of investment ownership and use pervades almost every aspect of daily lives and represents over 40% of Australia's wealth. Such assets do not exist in isolation; they are dynamic and forever evolving, impacted by a range of physical, economic, demographic, legal, and other forces. Consequently, a true appreciation of individual assets and of the property sector as a whole demands an understanding of both the assets themselves and the context and markets in which they exist. The sector is complex and on the face of it confusing. It is, however, not without logic and underlying themes and principles. This book provides a wider understanding of how the real property sector works. It covers topics such as the nature of real property and its functions, economic drivers, valuation principles, legal and tenure parameters, property taxation, land development and subdivision, asset and property management, and sustainability—all critical components in this complex and critically important sector. It provides a wide and balanced perspective for experienced practitioners, investors, students, and anyone involved in property decision making or wishing to secure a deeper understanding of these areas. The book integrates research-based theory with practical application and first-hand insights into a sector that underpins the Australian economy, its communities, and its sustainability.
