

Intelligence Testing in Professional Psychology

Topic: Psychology | Words: 868 | Pages: 3

Introduction

Professional psychology implements tools to assess individuals' attitudes and intelligence. Psychological tests can be traced back to the Han dynasty in ancient China, where public officials were given competency assessment tasks (Reynolds et al., 2021). Later, psychiatrists in the nineteenth and twentieth centuries introduced various types of evaluation to rate patients with intellectual disabilities (Reynolds et al., 2021). The founder of psychometry is Francis Galton, who introduced this concept and conducted an extensive systematic data collection on differences between individuals (Reynolds et al., 2021). The widely accepted Wechsler Adult Intelligence Scale (WAIS) method was developed in the 1930s to measure nonverbal and verbal skills (Reynolds et al., 2021). Modern assessments are frequently used in schools, psychiatric hospitals, and workplaces to collect information and make inferences about students', patients', and employees' characteristics. Although tests are often performed in standardized settings, these procedures only reveal a small portion of one's abilities, like the one presented in the case of Kieran. Therefore, every aspect of these assessment techniques should be observed in detail to avoid bias towards people with a low score but one outstanding potential, like Kieran.
