Visual Complexity and Intelligent Computer Graphics Techniques Enhancements Dimitri Plemenos, Georgios Miaoulis, 2009-07-09 In this book three main notions will be used in the editors search of improvements in various areas of computer graphics Artificial Intelligence Viewpoint Complexity and Human Intelligence Several Artificial Intelligence techniques are used in presented intelligent scene modelers mainly declarative ones Among them the mostly used techniques are Expert systems Constraint Satisfaction Problem resolution and Machine learning The notion of viewpoint complexity that is complexity of a scene seen from a given viewpoint will be used in improvement proposals for a lot of computer graphics problems like scene understanding virtual world exploration image based modeling and rendering ray tracing and radiosity Very often viewpoint complexity is used in conjunction with Artificial Intelligence techniques like Heuristic search and Problem resolution The notions of artificial Intelligence and Viewpoint Complexity may help to automatically resolve a big number of computer graphics problems However there are special situations where is required to find a particular solution for each situation In such a case human intelligence has to replace or to be combined with artificial intelligence Such cases and proposed solutions are also presented in this book [Intelligent Scene Modelling Information Systems](#) Georgios Miaoulis, Dimitri Plemenos, 2008-12-24 Scene modeling is a very important part in Computer Graphics because it allows creating more or less complex models to be rendered coming from the real world or from the designer's imagination However scene modeling is a very difficult task as there is a need of more and more complex scenes and traditional geometric modelers are not well adapted to computer aided design Even if traditional scene modelers offer very interesting tools to facilitate the designer's work they suffer from a very important drawback the lack of flexibility which does not authorize the designer to use incomplete or imprecise descriptions in order to express his/her mental image of the scene to be designed Thus with most of the current geometric modelers the user must have a quite precise idea of the scene to design before using the modeler to achieve the modeling task This kind of design is not really a computer aided one because the main creative ideas have been elaborated without any help of the modeler Declarative scene modeling could be an interesting alternative to traditional geometric modeling Indeed declarative scene modeling tries to give intuitive solutions to the scene modeling problem by using Artificial Intelligence techniques which allow the user to describe high level properties of a scene and the modeler to give all the solutions corresponding to imprecise properties
