Intelligent Control Systems With Labviewtm:

Intelligent Control Systems with LabVIEW™ Pedro Ponce-Cruz, Fernando D. Ramírez-Figueroa, 2009-10-23

Intelligent Control with LabVIEW™ is a fresh and pragmatic approach to the understanding of a subject often clouded by too much mathematical theory. It exploits the full suite of tools provided by LabVIEW™ showing the student how to design, develop, analyze, and visualize intelligent control algorithms quickly and simply. Block diagrams are used to follow the progress of an algorithm through the design process and allow seamless integration with hardware systems for rapid deployment in laboratory experiments. This text delivers a thorough grounding in the main tools of intelligent control: fuzzy logic systems, artificial neural networks, neuro-fuzzy systems, evolutionary methods, and predictive methods. Learning and teaching are facilitated by extensive use of worked examples, end-of-chapter problems with separate solutions, and provision of intelligent control tools for LabVIEW™.

Greenhouse Design and Control Pedro Ponce, Arturo Molina, Paul Cepeda, Esther Lugo, Brian MacCleery, 2014-09-11. Agricultural production is one of the main keys to the development of healthy societies. It is anticipated that agricultural systems will increasingly have to contend with temperature, humidity, and water stress in the near future. This makes the need to increase the efficiency of land and water use ever more urgent. The control and design of greenhouses allows to increase dramatically the quality of crops and extend the cultivation period year-round. A properly designed autonomous greenhouse based on hydroponics can greatly reduce the amounts of nutrients and energy expended in agricultural production. This book deals with different types of greenhouses, materials, structures, advanced control techniques, and tendencies that are needed for designing and controlling an advanced

greenhouse The control system is presented as an integral system which covers the explanation of basic and advanced concepts for a real time controller Also structural analysis is introduced whereby mechanical design is regarded as a key factor The book incorporates simulations and experimental results and utilizes LabVIEW and ADAMS software Finally it provides a perspective on the present state and future of greenhouses globally Written in a highly accessible manner this book will prove useful to horticulturalists agricultural engineers greenhouse engineers and designers Its easy to absorb contents are also suitable for under graduate students and researchers in agricultural and electronic engineering horticulture crop cultivation and soft computing
