Observation of the Earth and Its Environment Herbert J. Kramer, 2019-01-30 This book is about spaceborne missions and instruments In addition surveys of airborne missions and of campaigns can be found on the accompanying CD-ROM in pdf format Compared with the 3rd edition the spaceborne part grew from about 300 to 1000 pages

The complete text including the electronic only chapters contains more than 1900 pages New chapters treat the history of Earth observation and university missions The number of commercial Earth imaging missions has grown significantly A chapter contains reference data and definitions Extensive appendices provide a comprehensive glossary acronyms and abbreviations and an index of sensors An effort has been made to present the information in context to point out relationships and interconnections The book may serve as a reference and guide to all involved in the various national and international space programs researchers and managers service providers and data users teachers and students **Magnetic**

Reconnection Walter Gonzalez,Eugene Parker,2016-02-22 This book provides an overview of recent research highlights in the main areas of application of magnetic reconnection MR including planetary solar and magnetospheric physics and astrophysics It describes how research on magnetic reconnection especially concerning the Earth s magnetosphere has grown extensively due to dedicated observations from major satellite missions such as Cluster Double Star and Themis The accumulated observations from these missions are being supplemented by many theoretical and modelling efforts for which large scale computer facilities are successfully being used and the theoretical advances are also covered in detail Opening with an introductory discussion of some fundamental issues related to magnetic reconnection subsequent chapters address topics including collisionless magnetic reconnection MHD structures in 3D reconnection energy conversion processes fast reconnection mediated by plasmoids rapid reconnection and magnetic field topology Further chapters consider specific areas of application such as magnetospheric dayside and tail reconnection comparative reconnection in planetary systems and reconnection in astrophysical systems The book offers insight into discussions about fundamental concepts and key aspects of MR access to the full set of applications of MR as presently known in space physics and in astrophysics and an introduction to a new related area of study dealing with the annihilation of quantum magnetic fluxes and its implications in the study on neutron star activity The book is aimed primarily at students entering the field but will also serve as a useful reference text for established scientists and senior researchers *Scientific and Technical Aerospace Reports* ,1995 Science Budget
