Water Governance in the Face of Global Change Claudia Pahl-Wostl, 2015-09-04 This book offers the first comprehensive treatment of multi level water governance developing a conceptual and analytical framework that captures the complexity of

real water governance systems while also introducing different approaches to comparative analysis Applications illustrate how the ostensibly conflicting goals of deriving general principles and of taking context specific factors into account can be reconciled Specific emphasis is given to governance reform adaptive and transformative capacity and multi level societal learning The sustainable management of global water resources is one of the most pressing environmental challenges of the 21st century Many problems and barriers to improvement can be attributed to failures in governance rather than the resource base itself At the same time our understanding of complex water governance systems largely remains limited and fragmented The book offers an invaluable resource for all researchers working on water governance topics and for practitioners dealing with water governance challenges alike

Irrigation and River Basin Management Mark Svendsen,2005 With increasing water scarcity pressure to re allocate water from agriculture to other uses mounts along with a need to put in place institutional arrangements to promote higher value uses of water Many developing countries are now experimenting with establishing new institutional arrangements for managing water at the river basin level This book based on research by IWMI and others reviews basin management in six developed and developing countries It describes and applies a functional theory of river basin management based on the idea that there is a minimum set of functions required to manage basins effectively and a set of basic conditions that enable

effective management institutions to emerge The book examines the experiences of both developed and developing countries in order to see what lessons can be learned and to identify what constitutes the core of a theory of river basin management It concludes that although it is difficult for developing countries to adopt approaches and institutional designs directly from developed countries basic principles and lessons are transferable
