Thomas August, 2013-10-22 *Biological Response Mediators and Modulators* explains that the behavior of a cell depends upon the absorption of the ligand the quantity of functional receptors existing for ligand recognition and binding and the transduction of the signal through successive intercellular events The book presents such model systems as the low density lipoprotein LDL receptor the epidermal growth factor receptor and the insulin receptor The LDL receptor is a model for a class of surface receptors that facilitate the cellular application of macromolecules through the process of receptor mediated endocytosis The book discusses the general characteristics of receptor mediated endocytosis Another topic of interest is the property of growth related cell surface receptors The section that follows describes the function of these receptors as tyrosine specific protein kinases which is related to the protein yields of some viral oncogenes The amount of receptors in a cell depends upon the rates of synthesis and inactivation The book will provide valuable insights for scientists cytologists students and researchers in the field of chemistry *National Union Catalog*, 1982 Includes entries for maps and atlases

National Union Catalog, 1982, 1983 **The Interferon Crusade** Sandra Panem, 1984 In *The Interferon Crusade* Sandra Panem traces the development of interferon to highlight the policy issues raised by the biotechnology revolution questions that face the biomedical profession concerning relationships between government industry and academe and the need for committed fundamental biomedical research support and actively involved scientists in the setting of the federal research agenda **Cellular Responses to Molecular Modulators** Lee Mozes, 2012-12-02 *Miami Winter Symposia Volume 18 Cellular Responses to Molecular Modulators* is a collection of papers presented at the 13th Miami Winter Symposium held in Miami Beach in 1981 through the joint effort of the University of Miami School of Medicine and the Papanicolaou Cancer Research Institute Separating 27 manuscripts into chapters this book begins with a

discussion on protein structure and function This topic is followed by considerable chapters devoted to a whole series of molecules that precisely and specifically modulate a particular behavior and that can be studied in detail in isolated cells in culture These chapters also look into the research studies on mitogen receptor cytochemistry including special insertion properties and internal migratory fate after binding to effectors Other chapters discuss the primary gene product containing the thymosin a1 sequence the purification and production of interferons from cell cultures the biochemical mechanisms by which interferons modulate cell behavior and the ability of interferons to regulate natural killer lytic activity at the single cell or population level The concluding chapters explore the distinct interferon classes by their antigenic biological and chemical properties This book will be of great benefit to cell biologists and researchers Drugs and the Human Body Ken Liska,1986
