Granting and Renegotiating Infrastructure Concessions J. Luis Guasch, 2004-01-01 During the 1990s infrastructure concessions were hailed as the solution to Latin America's endemic infrastructure deficit by combining private sector efficiency with rent dissipation brought about by competition This publication examines the design and implementation of over 1 000 examples of concession contracts in order to identify the problems that have occurred in the process It goes on to highlight lessons to be learned for the future in order to realise the potential benefits of infrastructure reform and to contribute to economic growth and poverty reduction

Contractual Renegotiations and International Investment Arbitration Aikaterini Florou, 2020-03-02 In Contractual Renegotiations and International Investment Arbitration Aikaterini Florou explores the sensitive issues of renegotiating state contracts and the relationship between those contracts and the overarching international investment treaties By introducing novel insights from economics the author deconstructs the contract treaty interaction demonstrating that it is not only treaties that impact the underlying contracts but also that those contracts have an effect on the way the open textured treaty standards are interpreted The originality of the argument is combined with an innovative interpretative methodology based on relational

contract theory and transaction cost economics Departing from the traditional emphasis of international lawyers on the text of investment contracts Florou shows instead that such contracts are first and foremost economic animals and the theory of obsolescing bargaining does not paint a full picture of the contract treaty interaction

Public Private Partnerships

Renegotiations in Transportation Carlos Oliveira Cruz, Joaquim Miranda Sarmento, 2022-05-13 There is a growing interest in Public Private Partnerships PPPs particularly in infrastructure and public services Under the scope of PPPs renegotiations are becoming more relevant as empirical evidence suggests that most PPP projects are inevitably renegotiated i.e. the original contract needs to be adapted to new and unforeseen circumstances Renegotiations have a substantial impact on the contract and performance of a PPP and usually represent significant costs for users and taxpayers However very little is known about the management and mainly the process of renegotiating that will very likely occur This book provides a set of case studies of PPP renegotiations in the transport sector The authors illustrate the Portuguese experience a country that has been using PPP extensively particularly in transport The case studies provide an extensive and detailed analysis on each aspect of the project and the renegotiation What drives renegotiations Why are some projects more renegotiated than others What are the results How can the performance of renegotiation processes be improved These and other questions provide the basis for the discussions in this book The novelty and value of the book come mainly from the extent of information available Each case study deals with these questions in much more detail than what is common in the case studies approach

The Regulation of the Global Water Services Market Julien Chaisse, 2017-01-26 Drinking water and wastewater services must be provided to many sectors of a nation's economy including its industrial commercial and residential sectors This forms the scope of the water industry's activities and it explains why the privatization of water sanitation and water services has become a huge market and a much debated issue in a number of jurisdictions Historically the water industry has been run as a public service which is owned by the local or national government however recent trends suggest that the role of the private sector is increasing The growing economic interests concerning water and wastewater services are generating a tension with the recent recognition of the human right to water and sanitation This tension between human right and economic rules is the focus of this book which reviews all the international rules that form the regulation of global water services

gives farmers and manufacturers access to domestic and international markets and people in rural and urban areas access to schools and health services Handbook for Evaluating Infrastructure Regulatory Systems Ashley C. Brown,Jon Stern,Bernard William Tenenbaum,Defne Gencer,2006-01-01 More than 200 new infrastructure regulators have been created around the world in the last 15 years They were established to encourage clear and sustainable long term economic and legal commitments by governments and investors to encourage new investment to benefit existing and new customers There is now considerable evidence that both investors and consumers the two groups that were supposed to have benefited from these new regulatory systems have often been disappointed with their performance The fundamental premise of this book is that regulatory systems can be successfully reformed only if there are independent objective and public evaluations of their performance Just as one goes to a medical doctor for a regular health checkup it is clear that infrastructure regulation would also benefit from periodic checkups This book provides a general framework as well as detailed practical guidance on how to perform such regulatory checkups **Public-Private Partnerships** Paolo Urio,2010-12-18 Public Private Partnerships aims to discover the conditions under which public private partnerships may provide a viable alternative to the provision of public services and infrastructures by the state while achieving efficient sustainable peaceful and equitable development in four transition countries China Poland Russia and Ukraine These countries have experienced command economy under communist rule for at least thirty years They have only recently introduced market mechanisms In spite of a huge literature in favor of public private partnerships in the west scientific empirical evidence is generally mixed and balanced Success or failure depends upon many factors that need to be identified and analyzed Moreover economic performance may be achieved at the expense of other criteria such as equity public scrutiny and accountability This research a cooperation between the University of Geneva and the United Nations is the first attempt to evaluate public private partnerships based upon a review of the literature in Europe documentary analysis and in depth interviews in the four countries with representatives of the public and private sectors as well civil society organizations **Economic Analysis and Infrastructure Investment** Edward L. Glaeser,James M. Poterba,2021-11-11 Policy makers often call for increased spending on infrastructure which can encompass a broad range of investments from roads and bridges to digital networks that will expand access to high speed broadband Some point to the near term macroeconomic benefits such as job creation associated with infrastructure spending others point to the long term effects of such spending on productivity and economic growth Economic Analysis and Infrastructure Investment explores the links between infrastructure investment and economic outcomes analyzing key economic issues in the funding and management of infrastructure projects It includes new research on the short run stimulus effects of infrastructure spending develops new estimates of the stock of US infrastructure capital and explores incentive aspects of public private partnerships with particular attention to their allocation of risk The volume provides a reference for researchers seeking to study infrastructure issues and for policymakers tasked with determining the appropriate level and

allocation of infrastructure spending The Renegotiations of Public Private Partnerships in Transportation Carlos Oliveira Cruz, Joaquim Miranda Sarmiento, 2021-02-18 This book provides a theoretical basis for understanding the phenomenon of renegotiations in Public Private Partnerships PPPs It analyzes the case of transport projects and provides empirical evidence from a variety of real world projects What drives renegotiations Why are some projects more likely to be renegotiated than others What are the outcomes How can we improve the performance of renegotiation processes These questions form the core of discussion in this book PPPs are a procurement model for the delivery of infrastructure and public services that have experienced significant growth over the last three decades particularly in terms of the development of transportation projects The empirical evidence suggests that most PPP projects are inevitably renegotiated i e the original contract needs to be adapted to new and unforeseen circumstances The impacts of these changes on the welfare of the respective stakeholders are frequently asymmetric Most academic research and professional guidelines are focused on PPP contract design and preparation of the procurement process and very little has been published on the management and mainly the process of renegotiating that will in all likelihood occur This book fills this gap in the academic discussion Several country based analyses and case studies from Europe and the Americas provide the reader with practical applications of the theory

The Economics of Public-Private Partnerships Eduardo Engel, Ronald D. Fischer, Alexander Galetovic, 2014-09-15 Governments typically build and maintain public infrastructure which they fund through taxes But in the past twenty five years many developing and advanced economies have introduced public private partnerships PPPs which bundle finance construction and operation into a long term contract with a private firm In this book the authors provide a summary of what they believe are the main lessons learned from the interplay of experience and the academic literature on PPPs addressing such key issues as when governments should choose a PPP instead of a conventional provision how PPPs should be implemented and the appropriate governance structures for PPPs The authors argue that the fiscal impact of PPPs is similar to that of conventional provisions and that they do not liberate public funds The case for PPPs rests on efficiency gains and service improvements which often prove elusive Indeed pervasive renegotiations faulty fiscal
