*Distributed Network Systems* Weijia Jia,Wanlei Zhou,2006-06-14 Both authors have taught the course of Distributed Systems for many years in the respective schools During the teaching we feel strongly that Distributed systems have evolved from traditional LAN based distributed systems towards Internet based systems Although there exist many excellent textbooks on this topic because of the fast development of distributed systems and network programming protocols we have difficulty in finding an appropriate textbook for the course of distributed systems with orientation to the requirement of the undergraduate level study for today s distributed technology Specifically from to date concepts algorithms and models to implementations for both distributed system designs and application programming Thus the philosophy behind this book is to integrate the concepts algorithm designs and implementations of distributed systems based on network programming After using several materials of other textbooks and research books we found that many texts treat the distributed systems with separation of concepts algorithm design and network programming and it is very difficult for students to map the concepts of distributed systems to the algorithm design prototyping and implementations This book intends to enable readers especially

postgraduates and senior undergraduate level to study up to date concepts algorithms and network programming skills for building modern distributed systems It enables students not only to master the concepts of distributed network system but also to readily use the material introduced into implementation practices Wind Power Electric Systems Djamil Rekhoua, 2024-03-27 This book enhances existing knowledge in the field of wind systems It explores topics such as grid integration smart grid applications hybrid renewable energy systems and advancements in control and optimization approaches The book primarily aims to provide a quick and comprehensive understanding of wind systems including models control techniques optimization methods and energy storage systems to students at both undergraduate and postgraduate levels particularly those studying electrical engineering The book is divided into two parts The first part explores various stand alone wind applications such as rural electrification and pumping while the second part focuses on applications in grid connected systems Each system is accompanied by mathematical models and an illustrative example using the MATLAB Simulink package Moreover numerous examples are presented for potential implementation using the DSPICE package The book also introduces different electrical machine control approaches including vector control direct torque control and fuzzy logic controllers for various drive systems Furthermore intelligent techniques are developed to optimize wind operations Aiming to enhance existing knowledge in the field of wind systems this book covers topics such as grid integration smart grid applications hybrid renewable energy systems and advancements in control and optimization approaches This second edition is fully updated New sections on demand side management and energy storage systems have been included and each section has a summary and comparative table to further enhance clarity Additionally this new edition includes discussions on future trends and emerging technologies in wind energy systems making it a more comprehensive and up to date resource
