Goal Driven Learning Goal Driven Learning:

Goal-driven Learning Ashwin Ram, David B. Leake, 1995 Brings together a diversity of research on goal driven learning to establish a broad interdisciplinary framework that describes the goal driven learning process In cognitive science artificial intelligence psychology and education a growing body of research supports the view that the learning process is strongly influenced by the learner's goals The fundamental tenet of goal driven learning is that learning is largely an active and strategic process in which the learner human or machine attempts to identify and satisfy its information needs in the context of its tasks and goals its prior knowledge its capabilities and environmental opportunities for learning This book brings together a diversity of research on goal driven learning to establish a broad interdisciplinary framework that describes the goal driven learning process It collects and solidifies existing results on this important issue in machine and human learning and presents a theoretical framework for future investigations The book opens with an overview of goal driven learning research and computational and cognitive models of the goal driven learning process This introduction is followed by a collection of fourteen recent research articles addressing fundamental issues of the field including psychological and functional arguments for modeling learning as a deliberative planful process experimental evaluation of the benefits of utility based analysis to guide decisions about what to learn case studies of computational models in which learning is driven by reasoning about learning goals psychological evidence for human goal driven learning and the ramifications of goal driven learning in educational contexts The second part of the book presents six position papers reflecting ongoing research and current issues in goal driven learning Issues discussed include methods for pursuing psychological studies of goal driven learning frameworks for the design of active and multistrategy learning systems and methods for selecting and balancing the goals that drive learning A Bradford Book *Creating Purpose-Driven Learning Experiences* William M. Ferriter, 2015-04-29 Motivate and inspire students to learn at high levels By bringing meaningful work to the classroom students will develop curiosity become actively engaged and have a sense of purpose for their education Discover strategies and tips for reshaping the traditional classroom environment to give modern students opportunities to exercise choice in their curriculum master skills and demonstrate what they've learned *Goal-driven Learning* Ashwin Ram, David B. Leake, 1995 *Purpose-Driven Learning* Adam Moreno, 2022-07-12 Purpose Driven Learning advocates that the primary goal of education is to empower our students innate drive to learn which can be unlocked through the discovery and development of key social emotional learning skills This book offers an intentional framework for exploring strategies of inclusion SEL and assessment that goes beyond abstract buzzwords It features heartfelt stories intriguing research and effective action steps to inspire and empower teachers and their students to write authentic stories of social emotional well being and passionate lifelong learning PDL is a process that can be explored and utilized in any educational context teachers coaches camp directors faith leaders parents and more will all find value in this resource **Measurement Methodologies to Assess the Effectiveness of Global**

Online Learning Isaias, Pedro, Issa, Tomayess, Kommers, Piet, 2022-02-18 While online learning was an existing practice the COVID 19 pandemic greatly accelerated its capabilities and forced educational organizations to swiftly introduce online learning for all units. Though schools will not always be faced with forced online learning it is apparent that there are clear advantages and disadvantages to this teaching method with its usage in the future cemented. As such it is imperative that methods for measuring and assessing the effectiveness of online and blended learning are examined in order to improve outcomes and future practices. Measurement Methodologies to Assess the Effectiveness of Global Online Learning aims to assess the effectiveness of online teaching and learning in normal and pandemic situations by addressing challenges and opportunities of adoption of online platforms as well as effective learning strategies investigating the best pedagogical practices in digital learning questioning how to improve student motivation and performance and managing and measuring academic workloads online. Covering a wide range of topics such as the future of education and digital literacy it is ideal for teachers instructional designers curriculum developers educational software developers academics researchers and students.

Understanding Language Understanding Ashwin Ram, Kenneth Moorman, 1999 This book highlights cutting edge research relevant to the building of a computational model of reading comprehension as in the processing and understanding of a natural language text or story. The book takes an interdisciplinary approach to the study of reading with contributions from computer science psychology and philosophy. Contributors cover the theoretical and psychological foundations of the research in discussions of what it means to understand a text how one builds a computational model and related issues in knowledge representation and reasoning. The book also addresses some of the broader issues that a natural language system must deal with such as reading in context linguistic novelty and information extraction.

Learning in Natural and Artificial Systems Gianluca Baldassarre,Marco Mirolli,2013-03-29 It has become clear to researchers in robotics and adaptive behaviour that current approaches are yielding systems with limited autonomy and capacity for self improvement To learn autonomously and in a cumulative fashion is one of the hallmarks of intelligence and we know that higher mammals engage in exploratory activities that are not directed to pursue goals of immediate relevance for survival and reproduction but are instead driven by intrinsic motivations such as curiosity interest in novel stimuli or surprising events and interest in learning new behaviours The adaptive value of such intrinsically motivated activities lies in the fact that they allow the cumulative acquisition of knowledge and skills that can be used later to accomplish fitness enhancing goals Intrinsic motivations continue during adulthood and in humans they underlie lifelong learning artistic creativity and scientific discovery while they are also the basis for processes that strongly affect human well being such as the sense of competence self determination and self esteem This book has two aims to present the state of the art in research on intrinsically motivated learning and to identify the related scientific and technological open challenges and most promising research directions The book introduces the concept of intrinsic motivation in artificial systems reviews the relevant literature offers insights from the neural and behavioural sciences and presents novel tools for research The book is organized into six parts the chapters in Part I give general overviews on the concept of intrinsic motivations their function and possible mechanisms for implementing them Parts II III and IV focus on three classes of intrinsic motivation mechanisms

those based on predictors on novelty and on competence Part V discusses mechanisms that are complementary to intrinsic motivations and Part VI introduces tools and experimental frameworks for investigating intrinsic motivations The contributing authors are among the pioneers carrying out fundamental work on this topic drawn from related disciplines such as artificial intelligence robotics artificial life evolution machine learning developmental psychology cognitive science and neuroscience The book will be of value to graduate students and academic researchers in these domains and to engineers engaged with the design of autonomous adaptive robots The contributing authors are among the pioneers carrying out fundamental work on this topic drawn from related disciplines such as artificial intelligence robotics artificial life evolution machine learning developmental psychology cognitive science and neuroscience The book will be of value to graduate students and academic researchers in these domains and to engineers engaged with the design of autonomous adaptive robots
