well enough to enable those with a visionary sense to feel that it will be an important subject and it could be an interesting theme for a conference to be held within two years. It seemed a risky decision at the time but it turned out to be very successful when conducted in 1998. It has been stated that it took until 1997 for the business world to discover the Internet. In less than two years the Internet and the Intranets are a vital component for running major parts of the business world. This fast pace puts some pressure on writing papers and holding a conference effort has to be made to have meaningful contents despite the changes. A time span of 9 months between writing a paper and having it published seemed once to be very short but it is not so any more when referring to a dynamic issue like global networking.

Innovation and Finance Andreas Pyka, Hans-Peter Burghof, 2013-07-18. Innovation and finance are in a symbiotic and twin track relationship. A well functioning financial system spurs innovation by identifying and funding stimulating entrepreneurial activities which trigger economic growth. Innovations also open up profitable opportunities for the financial system. These mutual dynamics cause and need innovative adaptations in the financial system in order to better deal with the changing requirements of a knowledge based economy. The volume comprises different contributions which focus on the central imperative of this evident connection between financial markets and innovation which despite its importance is only barely considered in academia as well in practice so far. The book is about the mutual interdependence of innovation processes and finance. This interdependent relationship is characterized by a high degree of complexity which stems on the one hand from the truly uncertain character of innovation and on the other hand from the different time scales in both domains. Whereas innovation processes are long term and experimental financial markets are interested in shortening time horizons in order to optimize financial investments. Economies which do not manage to align the two realms of their economic system are in danger of ending up in either financial bubbles or economic stagnation. The chapters of this book deal with different aspects of this complex interrelationship between innovation and finance highlighting for example the role of stock markets, venture capital and international financial transactions as well as the historical co development of the financial and industrial domains. Thus far the communities in economics dealing with both issues are almost completely disconnected. The book brings together economic research dealing with the interface between innovation and finance and highlights the importance of the Neo Schumpeterian perspective. This topic is of particular interest in the current economic crisis affecting the Eurozone and its currency. Most of the policy instruments discussed and implemented so far are focused on short run targets. This discussion of the relationship between innovation and finance suggests a long run perspective to create new potentials for economic growth and a sustainable way out of the economic crisis.
