The Influence of International Trade on Economic Growth and Distribution in Developing Countries Tobias Bidlingmaier, 2010 The economies of developing countries today are highly integrated into world markets Trade volumes in relation to the overall size of the economy are often much higher in developing countries than in industrial ones The question that emerges from this trend is What impact does international trade have on economic growth and distribution in developing countries In order to answer this question the present study derives empirical testable hypotheses from theoretical models thereby bridging the existing gap between theory and empirical studies A broad range of trade variables derived from a growth model incorporating features from the new growth theories suggest deeper effects of trade on economic development that go beyond the standard openness correlations Likewise the simulation of a trade reform on goods and factor prices shows insightful results on welfare changes for various Thai household categories The distributional impacts do not correspond with the simple dichotomy of the rich getting richer and the poor becoming poorer

Economic growth and distribution of income Harumi T. Nelson, Terry L. Roe, Xinshen Diao, **Growth,**

Distribution, and Prices Stephen A. Marglin, 1984 What determines the rate of growth the distribution of income and the structure of relative prices under capitalism What in short makes capitalist economies tick This watershed treatise analyzes the answers to these questions provided by three major theoretical traditions neoclassical neo Marxian and neo Keynesian Until now the mutual criticism exchanged by partisans of the different traditions has focused disproportionately on the logical shortcomings of rival theories or on such questions as whether or not input output relationships can be described by a continuous substitution production function In this book these are at best secondary issues The real distinguishing features of the theories for Stephen Marglin are their characterization of labor markets and capital accumulation For clarity Marglin first sets out the essential features of each theory in the context of a common production model with a single good and a fixed coefficient technology He then formalizes the different theories as alternative ways of closing the model In subsequent chapters he examines the effects of relaxing key simplifying assumptions in particular the characterization of technology and the homogeneity of output and capital And although his primary emphasis is theoretical he does not ignore the problem of empirically testing the theories Finally he synthesizes the insights of the neo Marxian and neo Keynesian models into a single model that transcends the shortcomings of each taken separately Marglin anticipates that partisans of the different traditions will agree on one point each will allow that the book reveals the shortcomings of the other theories but will insist that it fails utterly to reflect the power and majesty of one's own particular brand of truth *Growth Distribution and Prices* will be controversial but it will not be ignored

Apartheid, Growth and Income Distribution in South Africa Mr. Tamim Bayoumi, Mr. Robert J. Corker, 1991-12-01 Estimates of a supply side model of the nonprimary sectors in which particular attention has been paid to modeling key characteristics of the evolution of the apartheid system are presented These imply that the wage differential between white and nonwhite workers doing similar jobs fell significantly over the last two decades to around 14 percent in 1990 This relatively small gap implies that medium term prospects for the advancement of the disadvantaged groups in South Africa depend heavily on their ability to take up skilled employment with the direct gains from the elimination of apartheid being relatively small

The effects of infrastructure development on growth and income distribution C??sar Calder??n, Luis Serv??n, 2013 The authors provide an empirical evaluation of the impact of infrastructure development on economic growth and income distribution using a large panel data set encompassing over 100 countries and spanning the years 1960 2000 The empirical strategy involves the estimation of simple equations for GDP growth and conventional inequality measures augmented to include among the regressors infrastructure quantity and quality indicators in addition to standard controls To account for the potential endogeneity of infrastructure as well as that of other regressors the authors use a variety of generalized method of moments GMM estimators based on both internal and external instruments and report results using both disaggregated and synthetic measures of infrastructure quantity and quality The two robust results are 1 growth is positively affected by the stock of infrastructure assets and 2 income inequality declines with higher infrastructure quantity and quality A variety of specification tests suggests that these results do capture the causal impact of the exogenous component of infrastructure quantity and quality on growth and inequality These two results combined suggest that infrastructure development can be highly effective to combat poverty Furthermore illustrative simulations for Latin American countries suggest that these impacts are economically quite significant and highlight the growth acceleration and inequality reduction that would result from increased availability and quality of infrastructure
