The Biology of Human Longevity Caleb E. Finch,2010-07-28 Written by Caleb Finch one of the leading scientists of our time The Biology of Human Longevity Inflammation Nutrition and Aging in the Evolution of Lifespans synthesizes several decades of top research on the topic of human aging and longevity particularly on the recent theories of inflammation and its effects on human health The book expands a number of existing major theories including the

Barker theory of fetal origins of adult disease to consider the role of inflammation and Harmon's free radical theory of aging to include inflammatory damage. Future increases in lifespan are challenged by the obesity epidemic and spreading global infections which may reverse the gains made in lowering inflammatory exposure. This timely and topical book will be of interest to anyone studying aging from any scientific angle. Author Caleb Finch is a highly influential and respected scientist ranked in the top half of the 1% most cited scientists. Provides a novel synthesis of existing ideas about the biology of longevity and aging. Incorporates important research findings from several disciplines including Gerontology, Genomics, Neuroscience, Immunology, Nutrition.

Don't Be a Slave to What You Crave Daisy Merey, 2003. This is the first book to separate stomach hunger from mental hunger, explain the crucial differences between the two and provide truly effective weight loss treatments targeted to each type. You will learn why you crave what you crave and how to manage your cravings. These are the real keys to losing weight and keeping it from coming back. Dr. Merey is a leading expert on obesity and was past President of the International Academy of Bariatric Physicians. For over 21 years she has been treating patients who have struggled with weight loss, obesity and disease.

Chasing Methuselah Todd T. W. Daly, 2021-02-04. The quest to live much longer has moved from legend to the laboratory. Recent breakthroughs in genetics and pharmacology have put humanity on the precipice of slowing down human aging to extend the healthy life span. The promise of longer, healthier life is enormously attractive and poses several challenging questions for Christians. Who wouldn't want to live 120 years or more before dying quickly? How do we make sense of human aging in light of Jesus' invitation to daily take up our crosses with the promise of the resurrection to come? Is there anything wrong with manipulating our bodies technologically to live longer? If so, how long is too long? Should aging itself be treated as a disease? In *Chasing Methuselah*, Todd Daly examines the modern biomedical anti-aging project from a Christian perspective, drawing on the ancient wisdom of the Desert Fathers who believed that the incarnation opened a way for human life to regain the longevity of Adam and the biblical patriarchs through prayer and fasting. Daly balances these insights with the christological anthropology of Karl Barth, discussing the implications for human finitude, fear of death, and the use of anti-aging technology, weaving a path between outright condemnation and uncritical enthusiasm.

Modelling of GPCRs Andrea Strasser, Hans-Joachim Wittmann, 2012-08-13. G protein coupled receptors (GPCRs) comprise an important protein family which is involved in signal transduction in the cell. Besides

that a large number of drugs available on market address GPCRs For an efficient and improved development of appropriate drugs molecular modelling of GPCRs is in order to understand the ligand receptor interactions and functionality of GPCRs on molecular level an important tool The book Modelling of GPCRs a practical handbook is focussed onto a practical introduction into molecular modelling of GPCRs This book is very useful for beginners in GPCR modelling but also addresses the advanced GPCR modeller On the one hand the book introduces principles of GPCR modelling including extensive examples On the other hand detailed outlooks onto advanced GPCR modelling techniques are presented Furthermore the book includes important data like information about crystal structures in a summarized manner or amino acid sequences which are essential for GPCR modelling in general Due to an increase in efficacy and data handling most modellers use LINUX as operating system To address this a summary of most important LINUX commands with examples is presented within the book

The Methuselah Manual David C. Gardner, Grace Joely Beatty, 1985 The authors read the popular literature on how to prevent illness and maintain vigorous health through nutrition exercise yoga and meditation They found two essential items missing the psychological aspects and a holistic approach was not considered Life Beyond 100 C. Norman Shealy, 2006-12-28 Using today's most leading edge therapies and breakthroughs in the science of longevity C. Norman Shealy one of the pioneering holistic physicians of our time shows how we can healthfully age to one hundred and beyond The idea of living well beyond one hundred years and enjoying those years in good health used to be the stuff of science fiction No longer C. Norman Shealy M.D. Ph.D. whom Caroline Myss calls a wizard genius scientist mystic physician offers Life Beyond 100 Secrets of the Fountain of Youth In this deeply learned and revolutionary book Dr. Shealy provides a new concept of longevity one that reveals that we can live far longer than current science suggests Basic healthy living and the use of alternative therapies have long been touted as the way to well being but Dr. Shealy takes these tenets a step further From the physiology of stress and its effect on the human mind and body to the importance of DHEA from the proven techniques of photostimulation and biofeedback training to groundbreaking suggestions for alleviating depression from Shealy's electromagnetic framework of life to his recommendations for optimal health Life Beyond 100 presents a detailed roadmap to achieve healthy aging or youthing The result of years of clinical practice and cutting edge research Life Beyond 100 also exposes the fallacies behind many of the claims made by the medical establishment and the pharmaceutical industry Shealy argues that rather than increasing people's life expectancy these two groups create the opposite effect consigning hundreds of thousands of people to an often miserable and premature old age by treating symptoms with an antidote prescription medicine that is often worse than the ailment itself As a counterpoint Life Beyond 100 provides the most ambitious yet medically grounded and commonsensical longevity program available Easy to follow and supported by advanced research Dr. Shealy's guide to uncovering the secrets of youthful aging redefines the concept of human longevity and offers a new vision of healthy living to one hundred and beyond

Signaling at the Cell Surface in the Circulatory and Ventilatory Systems Marc Thiriet,2011-12-14 The volumes in this authoritative series present a multidisciplinary approach to modeling and simulation of flows in the cardiovascular and ventilatory systems especially multiscale modeling and coupled simulations The cardiovascular and respiratory systems are tightly coupled as their primary function is to supply oxygen to and remove carbon dioxide from the body s cells Because physiological conduits have deformable and reactive walls macroscopic flow behavior and prediction must be coupled to nano and microscopic events in a corrector scheme of regulated mechanisms when the vessel lumen caliber varies markedly Therefore investigation of flows of blood and air in physiological conduits requires an understanding of the biology chemistry and physics of these systems together with the mathematical tools to describe their functioning Volume 3 is devoted to the set of mediators of the cell surface especially ion and molecular carriers and catalytic receptors that once liganded and activated initiate signal transduction pathways Intracellular cascades of chemical reactions trigger the release of substances stored in cellular organelles and or gene transcription and protein synthesis Primary mediators are included in models of regulated cellular processes but multiple secondary signaling components are discarded to allow simple representative modeling and to manage their inverse problems
