NTM - The New Uber-Bugs Veronique Dartois,Christine Sizemore,Thomas Dick,2019-11-04 Incidence of pulmonary disease caused by nontuberculous mycobacteria NTM such as Mycobacterium abscessus and M avium is increasing at an alarming rate surpassing tuberculosis TB in many countries Treatment durations are extremely long With low sputum conversion rates the outcomes are often disappointing Thus NTM disease resembles extremely drug resistant TB There is an urgent need for increased research on this dreadful disease For this book we brought together experts from a wide range of disciplines addressing current status gaps and needs and new developments in several NTM relevant research areas We start with the discussion of NTM disease presentations and clinical research This is followed by contributions on epidemiology antibiotic resistance mechanisms drug discovery and development bacteriology and targets and new diagnostic tools We would like to thank the 130 authors for sharing their work and insights We hope that this collection of articles will stimulate discussions and research activities on the challenging lung disease caused by the diverse group of pathogens called NTM

Microglial Polarization in the Pathogenesis and Therapeutics of Neurodegenerative Diseases Yu Tang,Isidre Ferrer,2018 Microglia mediated neuroinflammation is one of the shared prominent hallmarks among various forms of neurodegeneration Depending on the milieu in which microglia become activated the polarization of microglia shows to be heterogeneous with diverse functional phenotypes that range from pro inflammatory phenotypes to immunosuppressive phenotypes Therefore targeting microglial polarization holds great promise for the treatment of neurodegeneration This eBook focuses on the potential mechanisms of microglial polarization that are critically associated with a broad spectrum of neurodegenerative diseases including Parkinson s disease PD Alzheimer s disease AD Amyotrophic lateral sclerosis ALS Huntington s disease HD Traumatic brain injury TBI glaucomatous neurodegeneration and prion diseases This topic also involves the therapeutic targeting of microglial polarization by nutritional and pharmacological modulators Moreover this topic describes advanced technologies employed for studying microglia Age related changes in microglia functions are also discussed Overall this eBook provides comprehensive understandings of microglial polarization in the course of neurodegeneration linking with aging related microglial alterations and technologies developed for microglial studies Hopefully it will also give comprehensive insights into various aspects of therapeutic treatment for neurodegeneration through targeting microglial polarization

Mitogen Activated Protein Kinases Ritva Tikkanen,David Nikolic-Paterson,2020-06-18 Mitogen activated protein kinases MAPK are a large family of

enzymes that function as signal transducers to regulate a diverse range of physiological responses However signaling via extracellular signal regulated kinase ERK c Jun amino terminal kinase JNK and p38 MAPK also underpin many disease

processes This Special Issue provides new insights into how MAPK signaling contributes to specific pathological processes across a range of conditions including disorders of lung development type 2 diabetes proliferative skin diseases cardiovascular diseases and neurological diseases

The Mononuclear Phagocyte System in Infectious Disease Geanncarlo Lugo-Villarino, Céline Cougoule, Etienne Meunier, Yoann Rombouts, Christel Vérolet, Luciana Balboa, 2019-10-04

The Mononuclear Phagocyte System MPS of vertebrates is composed of monocytes macrophages and dendritic cells Together they form part of the first line of immune defense against a variety of pathogens bacteria fungi parasites and viruses and thus play an important role in maintaining organism homeostasis The mode of transmission type of replication and mechanism of disease causing differ significantly for each pathogen eliciting a unique immune response in the host Within this context the MPS acts as both the sentinel and tailor of the immune system As sentinels MPS cells are found in blood and within tissues throughout the body to patrol against pathogenic insult The strategy to detect microbial non self relies on MPS to recognize conserved microbial products known as pathogen associated molecular pattern PAMPs PAMPs recognition represents a checkpoint in the response to pathogens and relies on conserved pattern recognition receptors PRRs Upon PRR engagement MPS mount a cell autonomous attack that includes the internalization and compartmentalization of intracellular pathogens into toxic compartments that promote destruction In parallel MPS cells launch an inflammatory response composed of a cellular arm and soluble factors to control extracellular pathogens In cases when innate immunity fails to eliminate the invading microbe MPS serves as a tailor to generate adaptive immunity for pathogen eradication and generation of memory cells thus ensuring enhanced protection against re infection Indeed MPS cell functions comprise the capture process migration and delivery of antigenic information to lymphoid organs where type 1 immunity is tailored against intracellular microbes and type 2 immunity against extracellular pathogens However this potent adaptive immunity is also a double edge sword that can cause aberrant inflammatory disorders like autoimmunity or chronic inflammation For this reason MPS also tailors tolerance immunity against unwanted inflammation Successful clearance of the microbe results in its destruction and proper collection of debris resolution of inflammation and tissue healing for which MPS is essential Reciprocally as part of the evolutionary process taking place in all organisms microbes evolved strategies to circumvent the actions bestowed by MPS cells Multiple pathogens modulate the differentiation maturation and activation programs of the MPS as an efficient strategy to avoid a dedicated immune response Among the most common evasion strategies are the subversion of phagocytosis inhibition of PRR mediated immunity resistance to intracellular killing by reactive oxygen and nitrogen species restriction of phagosome maturation modulation of cellular metabolism and nutrient acquisition regulation of cell death and autophagy and modulation of pro inflammatory responses and hijacking of tolerance mechanisms among others The tenet of this eBook is that a better understanding of MPS in infection will yield insights for development of therapeutics to enhance antimicrobial processes or dampen detrimental inflammation for the host s benefit We believe that contributions to this topic

will serve as a platform for discussion and debate about relevant issues and themes in this field Our aim is to bring expert junior and senior scientists to address recent progress highlight critical knowledge gaps foment scientific exchange and establish conceptual frameworks for future MPS investigation in the context of infectious disease **Manipulating the Immunological Tumor Microenvironment** Peng Qu,Huanfa Yi,Keqiang Chen,2022-03-31 **Science** John Michels (Journalist),2005 A weekly record of scientific progress *Host and Pathogen Determinants of Allergic and Invasive Fungal Diseases* Stéphane Ranque,Joana Vitte,Agostinho Carvalho,Joshua J.
