Seong,Jung Han,Hiroshi Amano,Hadis Morkoc,2014-07-08 Light emitting diodes LEDs are already used in traffic signals signage lighting and automotive applications However its ultimate goal is to replace traditional illumination through LED

lamps since LED lighting significantly reduces energy consumption and cuts down on carbon dioxide emission. Despite dramatic advances in LED technologies e.g. growth, doping and processing technologies, however, there remain critical issues for further improvements yet to be achieved for the realization of solid state lighting. This book aims to provide the readers with some contemporary LED issues which have not been comprehensively discussed in the published books and on which the performance of LEDs is seriously dependent. For example, most importantly, there must be a breakthrough in the growth of high quality nitride semiconductor epitaxial layers with a low density of dislocations, in particular in the growth of Al rich and In rich GaN based semiconductors. The materials quality is directly dependent on the substrates used such as sapphire, Si, etc. In addition, efficiency droop, growth on different orientations and polarization are also important. Chip processing and packaging technologies are key issues. This book presents a comprehensive review of contemporary LED issues. Given the interest and importance of future research in nitride semiconducting materials and solid state lighting applications, the contents are very timely. The book is composed of chapters written by leading researchers in nitride semiconducting materials and device technology. This book will be of interest to scientists and engineers working on LEDs for lighting applications. Postgraduate researchers working on LEDs will also benefit from the issues this book provides.
