Linux Web Hosting with WebSphere, DB2, and Domino Budi Darmawan, 2000 **American Book Publishing Record**, 2002 Domino Web Access 6.5 on Linux, 2004 WebSphere for Linux on ISeries Yessong Johng, Fredy Cruz, Akiko Yonemura, 2004 **Set up Linux on IBM System z for Production** Lydia Parziale, Saulo Silva, David Borges De Sousa, Livio Sousa, Junius Mills, Qi Ye, IBM Redbooks, 2013-11-25 This IBM Redbooks publication shows the power of IBM System z virtualization and flexibility in sharing resources in a flexible production environment In this book we outline the planning and setup of Linux on System z to move from a development or test environment into production As an example we use one logical partition LPAR with shared CPUs with memory for a production environment and another LPAR that shares some CPUs but also has a dedicated one for production Running in IBM z VM mode allows for virtualization of servers and based on z VM shares can prioritize and control their resources The size of the LPAR or z VM resources depends on the workload and the applications that run that workload We examine a typical web server environment Java applications and describe it by using a database management system such as IBM DB2 Network decisions are examined with regards to VSWITCH shared Open Systems Adapter OSA IBM HiperSockets™ and the HiperPAV or FCP SCSI attachment used with a storage area network SAN Volume Controller along with performance and throughput expectations The intended audience for this IBM Redbooks publication is IT architects who are responsible for planning production environments and IT specialists who are responsible for implementation of production environments *Linux for WebSphere and DB2 Servers* Jakob Carstensen, 1999 *Integrating Lotus Domino 6 and WebSphere Express V5 on the IBM EServer ISeries Server* Deb Landon, Jim Ahrens, Tony Austin, Lu Cao, Paulo Meira, 2003 When most people enter their house they only have to unlock one or two locks on the front door Imagine however if you had to use a key and unlock the door to every room inside the house every time you wanted to go into another room Such is the case with many Information Technology IT systems these days which require a multitude of user IDs and passwords for every system and application you want to access Faced with growing user frustrations many companies are turning to a single signon SSO security system SSO lets users enter one user ID and password and then have access to an entire system or application This IBM Redbooks publication is for system administrators who want to understand how to configure an SSO environment between their IBM Lotus Domino and IBM WebSphere applications on the IBM Eserver iSeries server This environment requires using a Hypertext Transfer Protocol HTTP server having a common user registry and enabling security on both Domino and WebSphere applications In this book you learn how to configure and use either the Domino HTTP server or the IBM HTTP Server powered by Apache to serve both Domino and WebSphere content For SSO a Lightweight Directory Access Protocol LDAP server is required for common user registry between Domino and WebSphere This book shows you how to use either Domino as the LDAP server or OS 400 Directory Services Finally this book shows you how to enable security on both your Domino application and WebSphere

Application Server Express instance to support an SSO environment Please note that the additional material referenced in the text is not available from IBM **WebSphere V5 for Linux on ZSeries Connectivity Handbook** Viviane Anavi-Chaput,Michael Christensen,Joerg Haertel,Joerg Schmidbauer,Lynn Winkelbauer,2004 This IBM Redbooks publication discusses Linux based Java applications connecting to z OS and VSE backend environments on zSeries This book describes the implementation and deployment of Websphere Application Server Java frontend applications and the J2EE connectors needed on Linux for zSeries to connect to backend applications such as CICS IMS DB2 and MQ on zSeries This book explains the J2EE Connector architecture and provides the following comprehensive connector scenarios for connections to both z OS and VSE backend environments CICS Transaction Gateway IMS Connect WebSphere MQ JDBC to DB2 SOAP to CICS Set Up Linux on IBM System Z for Production Lydia Parziale,2013 Linux for WebSphere and DB2 Servers ,1999

Architecting High Availability Using WebSphere V6 on Z/OS Patrick Ryan,Amr Khafagy,Brian De Pradine,Frank Pani,Hong Min,G Connolly,2006 In this IBM Redbooks publication we describe how to configure the various components of an e business solution to exploit the availability and scalability benefits of zSeries and Parallel Sysplex using multiple LPARs running Linux for zSeries and z OS This publication applies to WebSphere for z OS V6 and is a continuation of the project evaluating high availability using WebSphere for z OS V5 and V4 Presented in three parts theory systems setup and availability tests we cover workload balancing the use of HTTP sessions various architectures and how to set up and test your infrastructures Considerations for configuring the systems and applications in an e business environment are also examined and we address such questions as Should there be separate front end systems for running the WebSphere Application Server How should e business components be configured to minimize or eliminate the impact of a system outage What is the best way to communicate between the WebSphere systems and the back end application systems What is the impact on the end user if there is a failure in one of the front end or back end systems **WebSphere Portal Server and DB2 Information**

Integrator Nagraj Alur,Isaac Allotey-Pappoe,Chris Delgado,Jayanthi Krishnamurthy,Walter Alvey,2004 Portals provide users with a single point of access to multiple types of information and applications through a Web interface IBM WebSphere Portal for Multiplatforms is one of the industries most comprehensive portal offerings It contains a wide range of portal technologies that help you develop and maintain B2C B2B and B2E portals WebSphere Portal provides considerable flexibility in addressing dynamic changes in marketplace conditions through advanced integration Web services and collaboration technology DB2 Information Integrator provides federated data access to a diverse range of heterogeneous data sources including relational data sources such as the DB2 family Oracle SQL Server and Teradata and semi structured data from WebSphere MQ messages XML documents Web services Microsoft Excel flat files ODBC or OLE DB sources plus a variety of formats unique to the life sciences industry It also provides integrated support for Lotus Extended Search which enables broad content access to a variety of content repositories including DB2 Content Manager as well as e mail databases

document repositories third party Internet search engines and LDAP directories This IBM Redbooks publication provides examples of the synergy between WebSphere Portal Server and DB2 Information Integrator in delivering portal solutions and will include sample portlets exploiting SQL UDFs JDBC and Web Services Please note that the additional material referenced in the text is not available from IBM **IBM Lotus Domino 6.5 for Linux on ZSeries Implementation** Mike

Ebbers,2003-01-01 **DB2 Virtualization** ,2009 Server virtualization technologies are becoming more popular to help efficiently utilize resources by consolidating servers IBM the first company that developed and made available the virtual technology in 1966 offers advanced powerful reliable and cost saving virtualization technologies in various hardware and software products including DB2 for Linux UNIX and Windows This IBM Redbooks publication describes using IBM DB2 9 with server virtualization Resource description page **z/VSE Using DB2 on Linux for System z** Helmut Hellner,Ingo Franzki,Martin Kammerer,Roopa Mahendra,Wilhelm Mild,IBM Redbooks,2010-02-03 Data is one the most critical and valuable assets of a business Critical strategic decisions can be made more quickly and effectively when they are based on complete accurate and timely operational data From this point of view it is important to have an enterprise data management architecture that supports a flexible global view of the business Many environments today are heterogeneous with a high quantity and diversity of data In this IBM Redbooks publication we help enterprise architects and IT managers with these environments make decisions for a centralized database or data warehouse We recommend a centralized data management environment on Linux on System z We include guidance for IBM z VSETM and Linux specialists to reorganize existing IBM DB2 VSE data and build a database environment with continuous operation in Linux on System z We begin this book by describing the possibilities and advantages of enterprise data management and different technical ways to realize it Then we discuss planning which is important for setting the foundation of the architecture that is implemented We explain the hardware considerations for capacity and performance planning For the z VSE system and Linux on System z we describe considerations for operation in a logical partition LPAR and in a virtualized environment with IBM z VM In addition we discuss the disk behavior for different workloads storage dependencies network connections and DB2 database considerations We also guide you in customizing the DB2 server for z VSE z VM and DB2 on Linux to allow existing z VSE and z VM applications to access the database on Linux on System z We include the data migration application considerations dependencies compatibility monitoring and tuning possibilities in such an environment **The Virtualization Cookbook for IBM z Systems Volume 3: SUSE Linux Enterprise Server 12** Lydia Parziale,Berthold Gunreben,Filipe Miranda,Paul W Novak,Ken Werner,IBM Redbooks,2016-05-06 This IBM Redbooks publication is Volume 3 of a series of three books called The Virtualization Cookbook for IBM z Systems The other two volumes are called The Virtualization Cookbook for IBM z Systems Volume 1 IBM z VM 6 3 SG24 8147 The Virtualization Cookbook for IBM z Systems Volume 2 Red Hat Enterprise Linux 7 1 Servers SG24 8303 It is suggested that you start with Volume 1 of this series because IBM z VM is the base layer

when installing Linux on IBM z Systems™ Volume 1 starts with an introduction describes planning and then describes z VM installation into a two node single system image SSI cluster configuration hardening automation and servicing It adopts a cookbook format that provides a concise repeatable set of procedures for installing and configuring z VM using the SSI clustering feature Volumes 2 and 3 describe how to roll your own Linux virtual servers on z Systems hardware under z VM The cookbook format continues with installing and customizing Linux Volume 3 focuses on SUSE Linux Enterprise Server 12 It describes how to install and configure SUSE Linux Enterprise Server 12 onto the Linux administration system which does the cloning and other tasks It also explains how to use AutoYaST2 which enables you to automatically install Linux using a configuration file and explains how to create and use appliances and bootable images from configuration files In addition it provides information about common tasks and tools available to service SUSE Linux Enterprise Server DB2 Virtualization

Whei-Jen Chen,Jason Chan,Olaf Mueller,Malcolm Singh,Tapio Väättänen,IBM Redbooks,2009-11-25 Server virtualization technologies are becoming more popular to help efficiently utilize resources by consolidating servers IBM the first company that developed and made available the virtual technology in 1966 offers advanced powerful reliable and cost saving virtualization technologies in various hardware and software products including DB2 for Linux UNIX and Windows This IBM Redbooks publication describes using IBM DB2 9 with server virtualization We start with a general overview of virtualization and describe specific server virtualization technologies to highlight how the server virtualization technologies have been implemented With this introduction anyone new to virtualization will have a better understanding of server virtualization and the industry server virtualization technologies available in the market Following the virtualization concept we describe in detail the setup configuration and managing of DB2 with three leading server virtualization technologies IBM Power Systems™ with PowerVMTM VMware Hyper V We discuss the virtual machine setup with DB2 in mind to help IT support understand the effective ways of setting up a virtual environment specific for DB2 We explain the architecture and components of these three server virtualization technologies to allow DBAs to understand how a database environment using DB2 can benefit from using the server virtualization technologies In addition we discuss the DB2 features and functions that can take advantage of using server virtualization These features are put into practice when describing how to set up DB2 with the three virtualization technologies discussed in this book This book also includes a list of best practices from the various tests performed while using these virtualization technologies These best practices can be used as a guideline or a reference when setting up DB2 using these virtualization technologies *Architecting High Availability Using WebSphere V6 on Z/OS* Patrick Ryan,Paul Rogers,2006 In this IBM Redbooks publication we describe how to configure the various components of an e business solution to exploit the availability and scalability benefits of zSeries and Parallel Sysplex using multiple LPARs running Linux for zSeries and z OS This publication applies to WebSphere for z OS V6 and is a continuation of the project evaluating high availability using WebSphere for z OS V5 and V4 Presented in three parts theory systems setup

and availability tests we cover workload balancing the use of HTTP sessions various architectures and how to set up and test your infrastructures Considerations for configuring the systems and applications in an e business environment are also examined and we address such questions as Should there be separate front end systems for running the WebSphere Application Server How should e business components be configured to minimize or eliminate the impact of a system outage What is the best way to communicate between the WebSphere systems and the back end application systems What is the impact on the end user if there is a failure in one of the front end or back end systems

DB2 10 for Linux on System Z Using Z/VM V6.2, Single System Image Clusters and Live Guest Relocation Lydia Parziale,Dan Davenport,Eduardo Kienetz,Tito Ogando,Manoj Pattabhiraman,Srivatsan Venkatesan,2012 IBM z VM 6 2 introduced significant changes to z VM with a multi system clustering technology that allows up to four z VM instances in a single system image SSI cluster This technology is important because it offers you an attractive alternative to vertical growth by adding new z VM systems In the past this capability required duplicate efforts to install maintain and manage each system With SSI these duplicate efforts are reduced or eliminated Support for live guest relocation LGR allows you to move Linux virtual servers without disrupting your business or incurring loss of service thus reducing planned outages The z VM systems are aware of each other and take advantage of their combined resources LGR enables you to relocate guests from a system requiring maintenance to a system that will remain active during maintenance A major advantage for DB2 v10 customers is that using z VM 6 2 does not require any changes to existing DB2 structures This remarkable benefit is due to the fact that DB2 v10 is installed as part of the Linux guest on z VM and is fully integrated into LGR This allows you to smoothly move DB2 v10 when you move Linux virtual servers without interrupting either DB2 v10 or z VM operations and services This IBM Redbooks publication will help you understand how DB2 10 on Linux for System z behaves while running on a z VM that is being relocated using z VM s 6 2 Live Guest Relocation feature In this book we explore memory management the DB2 Self tuning memory manager feature time synchronization networking and storage and performance considerations with regards to relocation We also offer some best practices found during a live guest relocation for DB2 v10

[Achieving High Availability on Linux for System z with Linux-HA Release 2](#) Lydia Parziale,Antonio Dias,Livio Teixeira Filho,Dulce Smith,Jin VanStee,Mark Ver,IBM Redbooks,2009-04-13 As Linux on System z becomes more prevalent and mainstream in the industry the need for it to deliver higher levels of availability is increasing IBM supports the High Availability Linux Linux HA project which provides high availability functions to the open source community One component of the Linux HA project is the Heartbeat program which runs on every known Linux platform Heartbeat is part of the framework of the Linux HA project This IBM Redbooks publication provides information to help you evaluate and implement Linux HA release 2 by using Heartbeat 2 0 on the IBM System z platform with either SUSE Linux Enterprise Server version 10 or Red Hat Enterprise Linux 5 To begin we review the fundamentals of high availability concepts and terminology Then we discuss the Heartbeat 2 0 architecture and its

components We examine some of the special considerations when using Heartbeat 2.0 on Linux on System z particularly Linux on z VM with logical partitions LPARs interguest communication by using HiperSockets™ and Shoot The Other Node In The Head STONITH by using VSMSEVERE for Simple Network IPL snIPL By reading this book you can examine our environment as we outline our installation and setup processes and configuration We demonstrate an active and passive single resource scenario and a quorum scenario by using a single resource with three guests in the cluster Finally we demonstrate and describe sample usage scenarios
