Generalized Eigenvalue Problems and Linear Matrix Equations on HPC Platforms Martin K"ohler, 2022-01-18 The solution of the generalized eigenvalue problem is one of the computationally most challenging operations in the field of numerical linear algebra A well-known algorithm for this purpose is the QZ algorithm Although it has been improved for decades and is available in many software packages by now its performance is unsatisfying for medium and large scale problems on current computer architectures In this thesis a replacement for the QZ algorithm is developed The design of the new spectral divide and conquer algorithms is oriented towards the capabilities of current computer architectures including

the support for accelerator devices The thesis describes the co design of the underlying mathematical ideas and the hardware aspects Closely connected with the generalized eigenvalue value problem the solution of Sylvester like matrix equations is the concern of the second part of this work Following the co design approach introduced in the first part of this thesis a flexible framework covering generalized Sylvester Lyapunov and Stein equations is developed The combination of the new algorithms for the generalized eigenvalue problem and the Sylvester like equation solves problems within an hour whose solution took several days incorporating the QZ and the Bartels Stewart algorithm

Imagined Civilizations Roger Hart, 2013-08-15 Roger Hart debunks the long held belief that linear algebra developed independently in the West Accounts of the seventeenth century Jesuit Mission to China have often celebrated it as the great encounter of two civilizations The Jesuits portrayed themselves as wise men from the West who

used mathematics and science in service of their mission Chinese literati official Xu Guangqi 1562 1633 who collaborated with the Italian Jesuit Matteo Ricci 1552 1610 to translate Euclid's Elements into Chinese reportedly recognized the superiority of Western mathematics and science and converted to Christianity Most narratives relegate Xu and the Chinese to subsidiary roles as the Jesuits translators followers and converts Imagined Civilizations tells the story from the Chinese point of view Using Chinese primary sources Roger Hart focuses in particular on Xu who was in a position of considerable power over Ricci The result is a perspective startlingly different from that found in previous studies Hart analyzes Chinese mathematical treatises of the period revealing that Xu and his collaborators could not have believed their declaration of the superiority of Western mathematics Imagined Civilizations explains how Xu's West served as a crucial resource While the Jesuits claimed Xu as a convert he presented the Jesuits as men from afar who had traveled from the West to China to serve the emperor
