Chapter Learning Objectives and Key Points

- 1.1 **Discuss how daily food choices can help or harm the body's health over time.**
The nutrients in food support growth, maintenance, and repair of the body. Deficiencies, excesses, and imbalances of energy and nutrients bring on the diseases of malnutrition. Nutrition profoundly affects health. Diet influences long-term health within the range set by genetic inheritance. Nutrition has little influence on some diseases but strongly affects others. Life choices, such as being physically active or using tobacco or alcohol, can improve or damage health.
- 1.2 **Describe the national *Healthy People* objectives for the nation, and identify some nutrition-related objectives.**
Each decade, the U.S. Department of Health and Human Services sets health and nutrition objectives for the nation.
- 1.3 **Define the term *nutrient* and be able to list the six major nutrients.**
Foremost among the nutrients in food is water. The energy-yielding nutrients are carbohydrates, fats (lipids), and protein. The regulator nutrients are vitamins and minerals. Food energy is measured in calories; nutrient quantities are often measured in grams. Food conveys emotional satisfaction and hormonal stimuli that contribute to health. Foods also contain phytochemicals.
- 1.4 **Summarize the five characteristics of a healthy diet and describe cultural or other influences on human food choices.**
Foods that form the basis of a nutritious diet are whole foods, such as ordinary milk and milk products, meats, fish, and poultry; vegetables and dried peas and beans; fruits; and grains. A well-planned diet is adequate, balanced, moderate in energy, and moderate in unwanted constituents, and offers a variety of nutritious foods. Cultural traditions and social values often revolve around foodways. Many factors other than nutrition drive food choices.
- 1.5 **Describe the major types of research studies and give reasons why national nutrition research is important for the health of the population.**
Scientists ask questions and then design research experiments to test possible answers. Single studies must be replicated before their findings can be considered valid. News media often sensationalize single-study findings, and so may not be trustworthy sources. National nutrition research projects, such as NHANES, provide data on U.S. food consumption and nutrient status.

Facilitating Seven Ways of Learning James R. Davis, Bridget D. Arend, 2023-07-03 For teachers in higher education who haven't been able to catch up with developments in teaching and learning James Davis and Bridget Arend offer an introduction that focuses on seven coherent and proven evidence based strategies The underlying rationale is to provide a framework to match teaching goals to distinct ways of learning based on well established theories of learning The authors present approaches that readers can readily and safely experiment with to achieve desired learning outcomes and build confidence in changing their methods of teaching Research on learning clearly demonstrates that learning is not one thing but many The learning associated with developing a skill is different from the learning associated with understanding and remembering information which in turn is different from thinking critically and creatively solving problems making decisions or change paradigms in the light of evidence Differing outcomes involve different ways of learning and teaching strategies The authors provide the reader with a conceptual approach for selecting appropriate teaching strategies for different types of content and for achieving specific learning objectives They demonstrate through examples how a focused and purposeful selection of activities improves student performance and in the process makes for a more effective and satisfying teaching experience The core of the book presents a chapter on each of the seven ways of learning Each chapter offers a full description of the process illustrates its application with examples from different academic fields and types of institutions clearly describes the teacher's facilitation role and covers assessment and online use The seven ways of learning are Behavioral Learning Cognitive Learning Learning through Inquiry Learning with Mental Models Learning through Groups and Teams Learning through Virtual Realities and Experiential Learning Along the way the authors provide the reader with a basis for evaluating other approaches to teaching and other learning methodologies so that she or he can confidently go beyond the seven ways to adapt or adopt further strategies This is the ideal companion for teachers who are beginning to explore new ways of teaching and want to do some serious independent thinking about learning The book can also be used to prepare graduate students for teaching and will be welcomed by centers for teaching and learning to help continuing faculty re-examine a particular aspect of their teaching
