is the common factor It's simple really Each of these issues can be attributed to poor file management skills In my experience the people with the worst file management skills are simply the ones that lack an understanding of how to navigate the Windows operating system However this situation can be easily rectified And once you can successfully navigate your computer's drive and folder structure you'll be hard pressed to misplace anything Although this process can seem daunting to the uninitiated this isn't black magic In fact it's actually quite simple Keeping your files and folders organized on the computer is no more difficult than keeping them organized in real life There is a place for everything and everything has its place We will show you how to navigate Windows correctly and efficiently Where specific types of files should be stored We'll also show you how best to name and manage your files such as using descriptive folders to identify files implementing the best naming conventions for files and directories and how to group various types of data together ensuring that the data you need is always readily available Finally we'll introduce you to some of the best options for transporting and protecting your data We will show you the skills you need to easily manage your data using clear and simple English without the confusing technical jargon All this and more can be accomplished with *File Management Made Simple* by your side
