Keevil, 2023-04-15 More than a century ago

a prospector discovered gold at Ontario's Kirkland Lake and a son was born to British immigrants in Saskatchewan. The boy Norman Bell Keevil went on to become a renowned scientist, teacher and prospector, discovering a small but high grade copper mine in Ontario. Parlaying that into control of the Kirkland Lake gold mine, fifty years later he formed the fledgling mining company Teck Corporation. In *Never Rest on Your Ores*, Keevil's son Norman, also a geoscientist, recounts how over the next fifty years a growing team of like-minded engineers and entrepreneurs built Canada's largest diversified mining company. In candid detail he tells the story of a company and its makers, of the discovery and creation of mines, of the mechanics of industry financing and of the role that mergers and acquisitions play in a volatile environment. Along the way he meets fascinating captains of industry and politicians not only in Canada but in the United States and around the world. Finding an ore body, rock that holds valuable metals and minerals and promoting its development in order to finance and create a mine, most often in hard to access wilderness, is complicated work comparable to locating and extracting a needle in a very messy haystack. Underlying this history is a constant need to replenish the ore and this need drives the people involved. Drawing new lessons from the turbulent period between 2005 and 2023, this new edition of *Never Rest on Your Ores* is both entertaining and instructive, a rare insider's account of an industry that has been crucial to the building of this country.

Pitfall Christopher Pollon, 2024-01-30 A compelling investigation into the global race to exploit our world's dwindling natural resources. In order to transition to clean energy in the coming decades, billions of tons of copper, nickel, silver and other metals will be required to build electric vehicles and green infrastructure and power smart technology. We need more metals than ever before, yet the qualities and quantities are diminishing, making the extraction process more polluting to land, air and water. And most of these metals will be mined from the global south where social conflict will only grow, led by Indigenous peoples demanding a greater say in how their wealth is used. In *Pitfall*, investigative journalist Christopher Pollon charts how transnational companies have controlled copper, precious metals and lithium mining in Latin America, made inroads into war-torn countries in Africa and extracted nickel, industrial and rare earth metals across Australia, Asia and the Pacific. Industry attention is now moving to deeper and darker places, including the depths of the ocean, sacrifice zones and near-Earth asteroids. The stakes couldn't be higher. How can we mine the metals we need without replicating the environmental and human rights abuses of the past?

The Mining Engineer Institution of Mining Engineers (Great Britain), 1904 **Power Metal** Vince Beiser, 2024-11-19 The powerful ways the metals we need to fuel technology and energy are spawning environmental havoc, political upheaval and rising violence, and how we can do better. An Australian millionaire's plan to mine the ocean floor, Nigerian garbage pickers risking their lives to salvage e-waste, a Bill Gates-backed entrepreneur harnessing AI to find metals in the Arctic. These people and millions more are part of the intensifying competition to find and extract the minerals essential for two crucial technologies: the internet and renewable energy. In *Power Metal*, Vince Beiser explores the Achilles heel of green power and digital technology: that manufacturing computers, cell

phones electric cars and other technologies demand skyrocketing amounts of lithium copper cobalt and other materials Around the world businesses and governments are scrambling for new places and new ways to get those metals at enormous cost to people and the planet Beiser crisscrossed the world to talk to the people involved and report on the damage this race is inflicting the ways it could get worse and how we can minimize the damage Power Metal is a compelling glimpse into this disturbing yet potentially promising new world **Transactions of the Institution of Mining Engineers** Institution of Mining Engineers (Great Britain),1905 List of members in v 1 3 5 7 9 11 13 15 17 19 20 22 24 26 28 30 32 35 37 39 41 43
