How The Body Shapes The Mind:

How the Body Shapes the Mind Shaun Gallagher, 2006-10-12 How the Body Shapes the Mind is an interdisciplinary work that addresses philosophical questions by appealing to evidence found in experimental psychology neuroscience studies of pathologies and developmental psychology There is a growing consensus across these disciplines that the contribution of embodiment to cognition is inescapable Because this insight has been developed across a variety of disciplines however there is still a need to develop a common vocabulary that is capable of integrating discussions of brain mechanisms in neuroscience behavioural expressions in psychology design concerns in artificial intelligence and robotics and debates about embodied experience in the phenomenology and philosophy of mind Shaun Gallagher's book aims to contribute to the formulation of that common vocabulary and to develop a conceptual framework that will avoid both the overly reductionistic approaches that explain everything in terms of bottom up neuronal mechanisms and inflationistic approaches that explain everything in terms of Cartesian top down cognitive states Gallagher pursues two basic sets of questions The first set consists of questions about the phenomenal aspects of the structure of experience and specifically the relatively regular and constant features that we find in the content of our experience If throughout conscious experience there is a constant reference to one's own body even if this is a recessive or marginal awareness then that reference constitutes a structural feature of the phenomenal field of consciousness part of a framework that is likely to determine or influence all other aspects of experience The second set of questions concerns aspects of the structure of experience that are more hidden those that may be more difficult to get at because they happen before we know it They do not normally enter into the content of experience in an explicit way and are often inaccessible to reflective consciousness To what extent and in what ways are consciousness and cognitive processes which include experiences related to perception memory imagination belief judgement and so forth shaped or structured by the fact that they are embodied in this way

How the Body Shapes the Mind Shaun Gallagher, 2005 This book contributes to the idea that to have an understanding of the mind consciousness or cognition a detailed scientific and phenomenological understanding of the body is essential

How Things Shape the Mind Lambros Malafouris, 2016-02-12 An account of the different ways in which things have become cognitive extensions of the human body from prehistory to the present An increasingly influential school of thought in cognitive science views the mind as embodied extended and distributed rather than brain bound or all in the head This shift in perspective raises important questions about the relationship between cognition and material culture posing major challenges for philosophy cognitive science archaeology and anthropology In *How Things Shape the Mind* Lambros Malafouris proposes a cross disciplinary analytical framework for investigating the ways in which things have become cognitive extensions of the human body Using a variety of examples and case studies he considers how those ways might have changed from earliest prehistory to the present Malafouris's Material Engagement Theory definitively adds materiality the world of things artifacts and material signs into the cognitive equation His account

not only questions conventional intuitions about the boundaries and location of the human mind but also suggests that we rethink classical archaeological assumptions about human cognitive evolution *Chiasmi International* 17 Aa.

Merleau-Ponty and Levinas Brock Bahler,2016-08-01 By examining the parent child relationship Childlike Peace in Merleau Ponty and Levinas argues that the primordial structure of our personal encounters with others should be understood as a dialectical spiral Drawing on the work of twentieth century philosophers Maurice Merleau Ponty and Emmanuel Levinas and informed by recent advances in cognitive neuroscience and child development Brock Bahler develops a phenomenological description of the parent child relationship in order to articulate an account of intersubjectivity that is fundamentally ethically oriented dialogical and mutually dynamic This dialectical spiral in contrast to Cartesian tradition of the subject and the Hegelian master slave dialectic suggests that our lives are equiprimordially interwoven with both the richness of mutual engagement and the responsibility to be for the other The parent child relationship provides the basis for a theoretical account of intersubjectivity that is marked by a creative interaction between self and other that cannot be reduced to an economic exchange a totalizing structure or a unilateral asymmetrical responsibility In conversation with the philosophical thought of Merleau Ponty Levinas Hegel Sartre and Freud as well as recent research in cognitive neuroscience and child development this work will be of interest for those working in the fields of continental philosophy embodied cognition philosophy of childhood psychoanalysis psychology philosophy for children P4C and education **How the Body**

Shapes the Way We Think Rolf Pfeifer,Josh Bongard,2006-10-27 An exploration of embodied intelligence and its implications points toward a theory of intelligence in general with case studies of intelligent systems in ubiquitous computing business and management human memory and robotics How could the body influence our thinking when it seems obvious that the brain controls the body In How the Body Shapes the Way We Think Rolf Pfeifer and Josh Bongard demonstrate that thought is not independent of the body but is tightly constrained and at the same time enabled by it They argue that the kinds of thoughts we are capable of have their foundation in our embodiment in our morphology and the material properties of our bodies This crucial notion of embodiment underlies fundamental changes in the field of artificial intelligence over the past two decades and Pfeifer and Bongard use the basic methodology of artificial intelligence understanding by building to describe their insights If we understand how to design and build intelligent systems they reason we will better understand intelligence in general In accessible nontechnical language and using many examples they introduce the basic concepts by building on recent developments in robotics biology neuroscience and psychology to outline a possible theory of intelligence

They illustrate applications of such a theory in ubiquitous computing business and management and the psychology of human memory Embodied intelligence as described by Pfeifer and Bongard has important implications for our understanding of both natural and artificial intelligence

Enacting Lecoq Maiya Murphy, 2018-12-30 This book examines the theatrical movement based pedagogy of Jacques Lecoq 1921 1999 through the lens of the cognitive scientific paradigm of enaction The conversation between these two both uncovers more of the possible cognitive processes at work in Lecoq pedagogy and proposes how Lecoq s own practical and philosophical approach could have something to offer the development of the enactive paradigm Understanding Lecoq pedagogy through enaction can shed new light on the ways that movement key to Lecoq s own articulation of his pedagogy might cognitively constitute the development of Lecoq s ultimate creative figure the actor creator Through an enactive lens the actor creator can be understood as not only a creative figure but also the manifestation of a fundamentally new mode of cognitive selfhood This book engages with Lecoq pedagogy s significant practices and principles including the relationship between the instructor and student identifications mime play mask work language improvisation and movement analysis

Aesthetics and the Sciences of Mind Greg Currie, Matthew Kieran, Aaron Meskin, Jon Robson, 2014-07-24 Through much of the twentieth century philosophical thinking about works of art design and other aesthetic products has emphasized intuitive and reflective methods often tied to the idea that philosophy s business is primarily to analyze concepts This philosophy from the armchair approach contrasts with methods used by psychologists sociologists evolutionary thinkers and others who study the making and reception of the arts empirically How far should philosophers be sensitive to the results of these studies Is their own largely a priori method basically flawed Are their views on aesthetic value interpretation imagination and the emotions of art to be rethought in the light of best science The essays in this volume seek answers to these questions many through detailed studies of problems traditionally regarded as philosophical but where empirical inquiry seems to be shedding interesting light No common view is looked for or found in this volume a number of authors argue that the current enthusiasm for scientific approaches to aesthetics is based on a misunderstanding of the philosophical enterprise and sometimes on misinterpretation of the science others suggest various ways that philosophy can and should accommodate and sometimes yield to the empirical approach The editors provide a substantial introduction which sets the scene historically and conceptually before summarizing the claims and arguments of the essays

and how the human subject interacts with the environment has significant implications for free will moral responsibility and moral justification of actions It also provides a better understanding of how different interventions in the brain can benefit or harm us In addition the book discusses brain imaging techniques to diagnose altered states of consciousness deep brain stimulation to treat neuropsychiatric disorders and restorative neurosurgery for neurodegenerative diseases It examines the medical and ethical trade offs of these interventions in the brain when they produce both positive and negative physical and psychological effects and how these trade offs shape decisions by physicians and patients about whether to provide and undergo them

Habitation in German Modernism Meindert Peters,2024 Joins a growing body of scholarship dealing with the productive relationship between literature and cognitive studies while also positing a new theory of modernism How do we habituate ourselves to environments that are not yet or no longer familiar What is at stake in adapting our behavior to new or changed situations The present study explores these questions by bringing German literature and thought of the early twentieth century a time of immense social and material change in Europe into dialogue with contemporary research in embodied cognition In six close readings of texts by Vicki Baum Walter Benjamin Alfred D oblin Martin Heidegger Georg Kaiser and Rainer Maria Rilke it brings into relief German modernism s concerns over how we adapt our behavior to environments that are new changed and or changing Rather than emphasizing the alienation and isolation that these texts investigate regarding the modern urban experience as much of the research on literary modernism has traditionally done Meindert Peters s book draws out the more dynamic moments of mastery responsiveness and cooperation that underpin habituation Moreover it extends these questions of habituation to the function of literature itself by showing how modernist forms invite engagement and participation **Habitation in German Modernism** not only joins a growing body of scholarship dealing with the productive relationship between literature and cognitive studies but also posits a new theory of modernism

Aesthetics and the Embodied Mind: Beyond Art Theory and the Cartesian Mind-Body Dichotomy Alfonsina Scarinzi,2014-11-24 The project of naturalizing human consciousness experience has made great technical strides e g in mapping areas of brain activity but has been hampered in many cases by its uncritical reliance on a dualistic Cartesian paradigm though as some of the authors in the collection point out assumptions drawn from Plato and from Kant also play a role The present volume proposes a version of naturalism in aesthetics drawn from American pragmatism above all from Dewey but also from James and Peirce one

primed from the start to see human beings not only as embodied but as inseparable from the environment they interact with and provides a forum for authors from diverse disciplines to address specific scientific and philosophical issues within the anti dualistic framework considering aesthetic experience as a process of embodied meaning making Cross disciplinary contributions come from leading researchers including Mark Johnson Jim Garrison Daniel D Hutto John T Haworth Luca F Ticini Beatriz Calvo Merino The volume covers pragmatist aesthetics neuroaesthetics enactive cognitive science literary studies psychology of aesthetics art and design sociology

Supersizing the Mind Andy Clark, 2010-12-31 Drawing upon recent work in psychology linguistics neuroscience artificial intelligence robotics human computer systems and beyond Supersizing the Mind offers both a tour of the emerging cognitive landscape and a sustained argument in favor of a conception of mind that is extended rather than brain bound The importance of this new perspective is profound If our minds themselves can include aspects of our social and physical environments then the kinds of social and physical environments we create can reconfigure our minds and our capacity for thought and reason

Attunement Alberto Perez-Gomez, 2016-02-26 How architecture can move beyond the contemporary enthusiasms for the technically sustainable and the formally dazzling to enhance our human values and capacities Architecture remains in crisis its social relevance lost between the two poles of formal innovation and technical sustainability In Attunement Alberto P rez G mez calls for an architecture that can enhance our human values and capacities an architecture that is connected attuned to its location and its inhabitants Architecture P rez G mez explains operates as a communicative setting for societies its beauty and its meaning lie in its connection to human health and self understanding Our physical places are of utmost importance for our well being

Drawing on recent work in embodied cognition Perez Gomez argues that the environment including the built environment matters not only as a material ecology but because it is nothing less than a constituent part of our consciousness To be fully self aware we need an external environment replete with meanings and emotions Perez Gomez views architecture through the lens of mood and atmosphere linking these ideas to the key German concept of Stimmung attunement and its roots in Pythagorean harmony and Vitruvian temperance or proportion He considers the primacy of place over space the linguistic aspect of architecture the voices of architecture and the voice of the architect architecture as a multisensory not pictorial experience with Piranesi Ledoux and Hejduk as examples of metaphorical modeling and how Stimmung might be put to work today to realize the contemporary possibilities of attunement *How the Mind Comes into Being* Martin V. Butz, Esther F. Kutter, 2017-02-09 More than 2000 years ago Greek philosophers were pondering the puzzling dichotomy between our physical bodies and our seemingly non physical minds Yet even today it remains puzzling how our mind controls our body and vice versa how our body shapes our mind How is it that we can think highly abstract thoughts seemingly fully detached from the actual physical reality This book offers an interdisciplinary introduction to embodied cognitive science addressing the question of how the mind comes into being while actively interacting with and learning from the environment by means of the own body By pursuing a functional and computational perspective concrete answers are provided about the fundamental mechanisms and developing structures that must bring the mind about taking into account insights from biology neuroscience psychology and philosophy as well as from computer science machine learning and artificial intelligence The book provides introductions to the most important challenges and available computational approaches on how the mind comes into being The book includes exercises helping the reader to grasp the material and understand it in a broader context References to further studies methodological details and current developments support more advanced studies beyond the covered material While the book is written in advanced textbook style with the primary target group being undergraduates in cognitive science and related disciplines readers with a basic scientific background and a strong interest in how the mind works will find this book intriguing and revealing *Knowing How: Essays on Knowledge, Mind, and Action* John Bengson, Marc A. Moffett, 2011-12-09 Knowledge how to do things is a pervasive and central element of everyday life Yet it raises many difficult questions that must be answered by philosophers and cognitive scientists aspiring to understand human cognition and agency What is the connection between knowing how and knowing that Is knowledge how simply a type of ability or disposition to act Is there an irreducibly practical form of knowledge What is the role of the intellect in intelligent action This volume contains fifteen state of the art essays by leading figures in philosophy and linguistics that amplify and sharpen the debate between intellectualists and anti intellectualists about mind and action highlighting the conceptual empirical and linguistic issues that motivate and sustain the conflict The essays also explore various ways in which this debate informs central areas of ethics philosophy of action epistemology philosophy of language and philosophy of mind and
