Abstract In a first step this ERP derives the theoretical necessity to provide voluntary strategic and non financial Information It is argued that companies are an integral part of a common environment and society acting in a framework of interdependent relationships A company is more and more seen as a community of interests of different groups and it can only act in an optimal way if the demands of all groups are taken into account and its behaviour is adjusted accordingly In this context interest groups demands for company Information depend on the possibilities of improvements in decision making or monitoring that arise with its use which in turn is mainly determined by the potential of Information to reduce uncertainty in the areas of interest For external decision makers uncertainty often arises from sources about which conservative company statements provide little insight Due to the traditional finance oriented concept of disclosure this is particularly true for strategic and non financial aspects Related additional Information that is voluntarily provided can considerably reduce uncertainty even more so as part of audited statements Conventional financial reporting and existing disclosure requirements will generally not nearly satisfy those information needs of user groups Any economic action though should only be taken if related benefits are exceeding related costs This priority of economicalness also holds for companies production processing and disclosure of Information Therefore it is necessary to consider as detailed as possible potential opportunities and disadvantages for voluntarily disclosing company Information both on and outside capital markets This is done in a second major part of the present work First voluntary disclosure can potentially affect share prices and thereby the market value of the firm markets not being strong form efficient So by giving company Information a higher market value can directly be induced thereby potentially lowering the cost of capital which for example improves the company's competitive position in the battle for cheap additional financing **How to Manage, Analyze, and Interpret Survey Data** Arlene

Fink, 2003 Shows how to manage survey data and become better users of statistical and qualitative survey information This book explains the basic vocabulary of data management and statistics and demonstrates the principles and logic behind the selection and interpretation of commonly used statistical and qualitative methods to analyze survey data General

Technical Report SRS, 2003 Applied Social Research NA Hall, Ralph Hall, 2008-06-10 Applied Social Research focuses on the real world context of applied research It discusses the often overlooked yet essential process of planning poor planning inevitably produces inadequate research The text helps researchers decide how to approach their applied research problems and to think through the major issues in the design and analysis of their project Applied Social Research also discussed the idea that in applied social research the use of a single method type is unlikely to provide answers to the often complex set of research questions being addressed and highlights the benefits of using two or more research methods in the one study The author argues that such mixed method designs are becoming widely used in applied social research particularly where the

methods combine qualitative and quantitative data thereby enabling a richer set of data to provide various perspectives on the research topic removing limitations imposed by using single methods Examples of such designs are provided throughout useful mixed method designs are outlined and their advantages discussed
