Interacting, exploring and working with humans, the new generation of robots will increasingly touch people and their lives. The credible prospect of practical robots among humans is the result of the scientific endeavour of a half a century of robotic developments that established robotics as a modern scientific discipline. The ongoing vibrant expansion and strong growth of the field during the last decade has fueled this second edition of the Springer Handbook of Robotics. The first edition of the handbook soon became a landmark in robotics publishing and won the American Association of Publishers PROSE Award for Excellence in Physical Sciences Mathematics as well as the organization's Award for Engineering Technology. The second edition of the handbook, edited by two internationally renowned scientists with the support of an outstanding team of seven part editors and more than 200 authors, continues to be an authoritative reference for robotics researchers, newcomers to the field and scholars from related disciplines. The contents have been restructured to achieve four main objectives: the enlargement of foundational topics for robotics, the enlightenment of design of various types of robotic systems, the extension of the treatment on robots moving in the environment and the enrichment of advanced robotics applications. Further to an extensive update, fifteen new chapters have been introduced on emerging topics and a new generation of authors have joined the handbook's team. A novel addition to the second edition is a comprehensive collection of multimedia references to more than 700 videos which bring valuable insight into the contents. The videos can be viewed directly augmented into the text with a smartphone or tablet using a unique and specially designed app. Springer Handbook of Robotics Multimedia Extension Portal <http://handbookofrobotics.org>.

Robotized technologies for enhanced shipyard operations: challenges and solutions Jawad Masood, Felix Vidal, David Castro, Afra M. Pertusa, Abel Feijoo, 2024-03-25. Large component manufacturing relies heavily on manual operations and human workers. Human centric

solutions can preserve industry specific knowledge extend capabilities and improve job performance Three robotized technologies were developed for shipyard operations ABB and KUKA robot hand guiding systems HGS a lightweight collaborative system for plasma cutting and a cost effective 3D projection system for retrofitting These technologies were developed at the open didactic factory which served as platforms for rapid technological advancement The HGS was integrated with ABB and KUKA and the 3D projection technology and lightweight collaborative system offered a cost effective solution for small and medium shipyards However transitioning to non flat surfaces presents challenges due to geometric variations and discrepancies between the computer aided design model and the actual component
