

Modifying Joints with Dovetails

Sliding dovetail

Dovetail housing

A sliding dovetail extends the dovetail shape to modify a tongue or tenon that then must slide into its dovetail housing from the end.

Dovetailing an open slot mortise-and-tenon corrects its weakness against downward force, and sliding dovetail tenons increase the rack resistance of a leg joint stabilizing the structure.

A dovetail lap joint can be housed or run through, with the dovetail itself double, including two shoulders, or single with one bare face.
