Spencer, 2020-10-27 Bridging memoir with key concepts in narratology philosophy and history of medicine and disability studies this book identifies and names the phenomenon of metagnosis the experience of learning in adulthood of a longstanding condition It can occur when the condition has remained undetected e g colorblindness and or when the diagnostic categories themselves have shifted e g ADHD More broadly it can occur with unexpected revelations bearing upon selfhood such as surprising genetic test results Though this phenomenon has received relatively scant attention learning of an unknown condition is often a significant and bewildering revelation one that subverts narrative expectations and customary categories How do we understand these revelations In addressing this topic Danielle Spencer approaches narrative medicine as a robust research methodology comprising interdisciplinarity narrative attentiveness and the creation of writerly texts Beginning with Spencer's own experience the book explores the issues raised by metagnosis from communicability to narrative intelligibility to different ways of seeing Next it traces the distinctive metagnostic narrative arc through the stages of recognition subversion and renegotiation discussing this trajectory in light of a range of metagnostic experiences from Blade Runner to real world mid life diagnoses Finally it situates metagnosis in relation to genetic revelations and the broader discourses concerning identity Spencer proposes that better understanding metagnosis will not simply aid those directly affected but will serve as a bellwether for how we will all navigate advancing biomedical and genomic knowledge and how we may fruitfully interrogate the very notion of identity      **The Foundational Handbook on**

*Control of Manipulation Robots* M. Vukobratovic, D. Stokic, 2012-12-06 This monograph represents the second book of the series entitled SCIENTIFIC FUNDAMENTALS OF ROBOTICS While the first volume provides a study of the dynamics of spatial mechanisms and its application to the design of these mechanisms the present one focuses on the synthesis of control based on the knowledge of dynamic models presented in detail in the first volume In this way a logical continuity is formed in which one may easily recognize a dynamic approach to the design of manipulation robots and the synthesis of control algorithms based on exact mathematical models of dynamics of open spatial mechanisms When writing the monograph the authors had the following objective to prove that a study of dynamic properties of manipulation mechanisms is justifiable to use the dynamic properties in the synthesis of control algorithms and to determine from one case to another a proper measure of dynamics depending on the type of manipulation task the velocity at which it is carried out and on the type of the manipulation mechanisms itself The authors believe they have thus made the study of dynamics aimed at synthesizing algorithms for dynamic control free from unnecessary academicism and allowed the readers to apply all the results presented here to practical purposes of manipulator design in the broader sense of the word At this point the authors would like to present some concepts which were their guidelines in preparing this text
