Monoidal Category Theory Noson S. Yanofsky, 2024-11-05 A comprehensive cutting edge and highly readable textbook that makes category theory and monoidal category theory accessible to students across the sciences Category theory is a powerful framework that began in mathematics but has since expanded to encompass several areas of computing and science with broad applications in many fields In this comprehensive text Noson Yanofsky makes category theory accessible to those without a background in advanced mathematics Monoidal Category Theory demonstrates the expansive uses of categories and in particular monoidal categories throughout the sciences The textbook starts from the basics of category theory and progresses to cutting edge research Each idea is defined in simple terms and then brought

alive by many real world examples before progressing to theorems and uncomplicated proofs Richly guided exercises ground readers in concrete computation and application The result is a highly readable and engaging textbook that will open the world of category theory to many Makes category theory accessible to non math majors Uses easy to understand language and emphasizes diagrams over equations Incremental iterative approach eases students into advanced concepts A series of embedded mini courses cover such popular topics as quantum computing categorical logic self referential paradoxes databases and scheduling and knot theory Extensive exercises and examples demonstrate the broad range of applications of categorical structures Modular structure allows instructors to fit text to the needs of different courses Instructor resources include slides

Faith across the Multiverse Andy Walsh,2022-10-04 Science is often presented as a set of propositions to affirm On those terms the existence of God becomes yet another such proposition and all science can offer is a yes or a no Andy Walsh thinks science offers more By enriching our language with new concepts science can help us know God rather than merely know of him This is the pattern established in the Bible the psalmists the prophets the epistle writers they all use language about nature to help us understand God Even Jesus relied on metaphors from the natural world when he wanted to explain the kingdom of God *Faith across the Multiverse* explores concepts from contemporary science to illuminate scripture and reveal more about the God who has unfurled the multiverse Sections of the book cover metaphors and parables from mathematics physics biology and computer science

Is Math Real? Eugenia Cheng,2023-08-15 One of the world's most creative mathematicians offers a brilliant and mesmerizing Popular Science new way to look at math focusing on questions not answers Winner of the Los Angeles Times Book Prize and a New Scientist Best Book of the Year Where do we learn math From rules in a textbook From logic and deduction Not really according to mathematician Eugenia Cheng we learn it from human curiosity most importantly from asking questions This may come as a surprise to those who think that math is about finding the one right answer or those who were told that the dumb question they asked just proved they were bad at math But Cheng shows why people who ask questions like Why does $1+1=2$ are at the very heart of the search for mathematical truth *Is Math Real* is a much needed repudiation of the rigid ways we're taught to do math and a celebration of the true curious spirit of the discipline Written with intelligence and passion *Is Math Real* brings us math as we've never seen it before revealing how profound insights can emerge from seemingly unlikely sources

Mathematical Challenges For All Roza Leikin,2023-03-17 This book argues that mathematical challenge can be found at any level and at every age and constitutes an essential characteristic of any mathematics classroom aimed at developing the students mathematical knowledge and skills Since each mathematics classroom is heterogeneous with respect to students mathematical potential quality mathematical instruction results from matching the level of mathematical challenge to different students potential Thus effective integration of mathematical challenge in the instructional process is strongly connected to the equity principle of mathematics education In the three sections in this volume readers can find diverse views on mathematical challenges in

curriculum and instructional design kinds and variation of mathematically challenging tasks and collections of mathematical problems Evidence based analysis is interwoven with theoretical positions expressed by the authors of the chapters Cognitive social and affective characteristics of challenging mathematical activities are observed and analyzed The volume opens new avenues of research in mathematics education and pose multiple questions about mathematical instruction rich in mathematical challenge for all The authors invite readers to explore and enjoy mathematical challenges at different levels

The Joy of Abstraction Eugenia Cheng, 2022-10-13 Mathematician and popular science author Eugenia Cheng is on a mission to show you that mathematics can be flexible creative and visual This joyful journey through the world of abstract mathematics into category theory will demystify mathematical thought processes and help you develop your own thinking with no formal mathematical background needed The book brings abstract mathematical ideas down to earth using examples of social justice current events and everyday life from privilege to COVID 19 to driving routes The journey begins with the ideas and workings of abstract mathematics after which you will gently climb toward more technical material learning everything needed to understand category theory and then key concepts in category theory like natural transformations duality and even a glimpse of ongoing research in higher dimensional category theory For fans of *How to Bake Pi* this will help you dig deeper into mathematical concepts and build your mathematical background *Unequal* Eugenia

Cheng, 2025-09-02 Why the familiar equal sign isn't just a marker of sameness but a gateway into math's and humanity's most profound questions Math is famous for its equations $1 + 2 = 3$ $a + b = c$ $2x + y = mx + b$ Much of the time it can seem like that's all mathematics is following steps to show that what's on one side of an equation is the same as what's on the other In *Unequal* Eugenia Cheng shows that's just part of the story and the boring part to boot Mathematics isn't only about showing how numbers and symbols are the same It isn't even just about numbers and symbols at all but a world of shapes symmetries logical ideas and more And in that world the boundary between things being equal and unequal is a gray area or perhaps a rainbow of beautiful vibrant subtly nuanced color As *Unequal* shows once you go over that rainbow almost everything can be considered equal and unequal at the same time whether it's shapes seen from the right perspective a circle is the same as an ellipse words synonyms or people even numbers It all depends on what features we care about And it's up to us what we do about it That's because mathematics isn't a series of rules facts or answers It's an invitation to a more powerful way of thinking

Metadesigning Designing in the Anthropocene John Wood, 2022-06-08 Long sighted radical and provocative this book offers a foundational framework of concepts principles and methods exemplified with selected tools to enable metadesigners to manage and reinvent their

practices The book reminds readers that designers are albeit unwittingly helping to shape the Anthropocene Despite their willingness to deliver greener products and services designers find themselves part of an industry that has become the go to catalyst for dividends and profit If our species is to achieve the rehabilitation and metamorphosis we may need to design at the level of paradigms genres lifestyles and currencies This would mean making design more integrated comprehensive adaptive transdisciplinary self reflexive and relational The book therefore advocates a shift of emphasis from designing sustainable products services and systems towards cultivating synergies that will induce regenerative lifestyles The book will be of interest to managers designers scholars and educators from a wide range of backgrounds including design research design history design studies and environmental studies

x + y Eugenia Cheng, 2020-08-25 Shortlisted for the 2021 Phi Beta Kappa Book Award for Science One of NPR's Best Books of 2020 One of the Most Fascinating Books WIRED Read in 2020 A brilliant mathematician examines the complexity of gender and society and forges a path out of inequality Why are men in charge After years in the male dominated field of mathematics and in the female dominated field of art Eugenia Cheng has heard the question many times In x y Cheng argues that her mathematical specialty category theory reveals why Category theory deals more with context relationships and nuanced versions of equality than with intrinsic characteristics Category theory also emphasizes dimensionality much as a cube can cast a square or diamond shadow depending on your perspective so too do gender politics appear to change with how we examine them Because society often rewards traits that it associates with males such as competitiveness we treat the problems those traits can create as male But putting competitive women in charge will leave many unjust relationships in

place If we want real change we need to transform the contexts in which we all exist and not simply who we think we are

Mathematics (Education) in the Information Age Stacy A. Costa, Marcel Danesi, Dragana Martinovic, 2020-12-10 This book brings together ideas from experts in cognitive science mathematics and mathematics education to discuss these issues and to present research on how mathematics and its learning and teaching are evolving in the Information Age Given the ever broadening trends in Artificial Intelligence and the processing of information generally the aim is to assess their implications for how math is evolving and how math should now be taught to a generation that has been reared in the Information Age It will also look at the ever spreading assumption that human intelligence may not be unique an idea that dovetails with current philosophies of mind such as posthumanism and transhumanism The role of technology in human evolution has become critical in the contemporary world Therefore a subgoal of this book is to illuminate how humans now use their sophisticated technologies to chart cognitive and social progress Given the interdisciplinary nature of the chapters this will be of interest to all kinds of readers from mathematicians themselves working increasingly with computer scientists to cognitive scientists who carry out research on mathematics cognition and teachers of mathematics in a classroom

Braille Book Review , 2017 Museen und die Utopie der Vernetzung Lukas Fuchsgruber, 2025-10-27 30 Jahre World Wide Web haben die Vorstellung von Museen und Sammlungen grundlegend verändert Kunstwerke und andere Objekte erscheinen im digitalen Raum Menschen interagieren mit Sammlungen ohne physisch anwesend zu sein und sogar das Internet selbst scheint zu einem Ausstellungsraum geworden zu sein Doch wie verändern sich Museen in der Digitalisierung wenn wir sie als mehr verstehen als nur Gebüde in denen Gegenstände aufbewahrt und ausgestellt werden Museen sind auch Orte der Begegnung des Konflikts und der sozialen Beziehungen Lukas Fuchsgruber geht der Frage nach wie sich die aktuelle Diskussion um Museen als gesellschaftliche Räume mit der Politik von Daten verbinden lässt
