*ELGAMAL CRYPTOSYSTEM KEY GENERATION,*

*ENCRYPTION, DECRYPTION, AND DIGITAL SIGNATURES: LEARN BY EXAMPLES WITH PYTHON AND TKINTER* Vivian Siahaan, Rismon Hasiholan Sianipar, 2024-09-01 This book presents an interactive Python application designed to showcase the ElGamal encryption algorithm through a user friendly Tkinter graphical user interface GUI At its heart the application focuses on the three core aspects of ElGamal cryptography key generation encryption and decryption Users can generate ElGamal keys of varying sizes by specifying the number of bits and view these keys in multiple formats including raw integers hexadecimal and Base64 encoding This flexibility facilitates seamless integration of the keys into different systems and applications making the tool invaluable for both educational purposes and practical implementations Additionally the application allows users to encrypt and decrypt data using the generated ElGamal keys providing a comprehensive demonstration of how this cryptographic scheme secures information The GUI simplifies the process of managing and visualizing encrypted and decrypted data helping users understand the effectiveness of ElGamal encryption in maintaining data confidentiality By combining these functionalities within an intuitive interface the project not only illustrates key cryptographic concepts but also offers a hands on approach to learning and applying ElGamal encryption in real world scenarios In chapter one we developed a project which aims to create an intuitive graphical user interface GUI for generating and displaying ElGamal encryption keys using the Tkinter library Users can specify the number of bits for key generation and view the keys in multiple formats including raw integers hexadecimal and Base64 encoding This flexibility ensures compatibility with various systems and applications making it easier for users to integrate and verify cryptographic keys The application features a tabbed interface that organizes the key generation process Users can enter the desired key size in one tab and generate the keys with a button click The keys are then displayed in separate tabs according to their format This structured approach simplifies the comparison and verification of keys in different representations enhancing the usability and effectiveness of the key management process In chapter two the fifth project integrates ElGamal encryption and decryption techniques into a user friendly application for securing sensitive data such as credit card numbers and transaction details The application generates synthetic datasets to demonstrate these cryptographic methods in action allowing users to create keys encrypt data and decrypt it to verify integrity and confidentiality Built with Tkinter the application provides an interactive experience with an intuitive graphical interface Users can specify key generation parameters generate synthetic transaction data and view the original encrypted and decrypted data through a series of tabs This design facilitates easy visualization of encryption and decryption effects making the application a practical tool for understanding and experimenting with cryptographic operations In chapter two the ninth project involves developing a Tkinter based GUI to demonstrate the ElGamal encryption algorithm using synthetic employee data The application provides an intuitive platform for generating encrypting and decrypting data while also visualizing results through interactive graphs Users can manage data with multiple tabs for setup original encrypted and decrypted views and utilize matplotlib for visualizing data

distributions and trends By integrating data management encryption and visualization the project offers a comprehensive tool for understanding and applying the ElGamal algorithm in a secure and user friendly manner In chapter three the fourth project is designed to process Bitcoin transactions using the ElGamal encryption scheme It features a comprehensive approach that includes generating encrypting decrypting and analyzing Bitcoin transaction data The core of the project is the integration of ElGamal encryption to ensure the confidentiality and integrity of transaction data demonstrated through a user friendly graphical interface The application utilizes Tkinter for the interface and Matplotlib for data visualization allowing users to interact with and analyze synthetic Bitcoin datasets It supports functionalities like encryption decryption and digital signature verification all while presenting data through intuitive visual graphs This combination of encryption and visualization provides a robust tool for secure transaction processing and analysis In chapter three the sixth project is designed to demonstrate the integration of cryptographic techniques with data visualization and management through a graphical user interface GUI built using Tkinter At its core the project utilizes the ElGamal cryptosystem a public key cryptographic algorithm known for its security in encryption and digital signatures The GUI enables users to interact with various functionalities of the ElGamal system including encryption decryption and signature verification all while managing and visualizing a synthetic dataset The ElGamal class encapsulates the core cryptographic functionalities providing methods for encrypting and decrypting messages as well as signing and verifying signatures It uses secure random number generation and hashing to ensure robust cryptographic operations To facilitate testing and demonstration the project includes a synthetic dataset generation function `generate_gov_dataset` which creates a mock dataset simulating government documents with attributes like document IDs classification levels departments and content This dataset allows users to apply cryptographic techniques to structured data providing a realistic scenario for data security operations The `process_dataset` function applies encryption and digital signatures to this synthetic dataset transforming it into an encrypted format with corresponding signatures for content verification The GUI implemented in the `ElGamalGUI` class serves as the primary interface featuring tabs for viewing original and encrypted data decrypted data signatures and distribution graphs These visualizations help users understand the impact of encryption on data characteristics and evaluate the effectiveness of the cryptographic methods Overall this project provides a comprehensive tool for exploring cryptographic techniques in a user friendly environment offering valuable insights into practical applications of encryption and digital signatures in data security
