Autocar, 2005 Pathways for a transition to a sustainable hydrogen transportation fuel infrastructure in California
Marlene Hilker, 2004-02-20 Inhaltsangabe Abstract As society enters the 21st century there is a growing awareness of the burdens being placed on the planet as its ability to keep up with the demands of modern society are strained One of the major contributors to this burden happens to be a main resource required for sustained development Energy has always been and will always be a necessary resource for existence Since the industrial revolution fossil fuels such as coal and oil have been the main stay fuel to accommodate society's appetite As the demand for this resource increases the climatic and socio economic costs of this fuel become more acute and it is well documented that the supply of this fuel is not endless One of the major consumers of this fuel as a society is the transportation sector The processes in place which take it from the ground to its combustion as a fuel are some of the main culprits which adversely affect the planet This thesis explores the issues associated with the introduction of another energy resource Hydrogen as a replacement fuel for the transportation industry It is argued that for the transportation sector Hydrogen offers the most promising alternative as a fuel Making Hydrogen readily available and affordable through the retail infrastructure is of paramount importance if its widespread use is to be achieved The logistics of this are explored and it is believed that the introduction of small Hydrogen fuelers at existing retail outlets is the preferred method to instantiate the transition in the short to medium term Those fueling stations can utilize grid electricity to produce Hydrogen by the means of water electrolysis or take advantage of the existing Natural Gas distribution infrastructure to produce Hydrogen via steam reformation This thesis examines the Well to Wheels impacts and economic feasibility of those options and compares them to existing vehicle and fuel technologies The state of California was chosen as a target market due to its high automobile density the resulting pollution issues and its clear mandate on promoting alternative energy sources Inhaltsverzeichnis Table of Contents I Introduction 2 1 Summary of the work 2 2 Environmental economic and political challenges associated with the use of fossil fuels especially oil 3 2 1 Environmental and Social Problems with Fossil Fuels 3 2 1 1 Environmental pollution Oil spills and discharges 3 2 1 2 Environmental pollution Local **The Second Automobile Revolution** M. Freyssenet, 2009-04-30 The rapid takeoff of the continent sized national economies and the increasing expense of extraction have led to strong tensions in petrol prices and a race towards alternative driving systems This book analyses the emergence of a second automobile revolution through the trajectories of automobile firms since the nineties *Forum for Applied Research and Public Policy*, 1998 **Japan in the Global Age** University of British Columbia. Centre for Japanese Research, 2001 **Business Rankings Annual** Gale Group, 1998-11 The staff of the Business Library of the Brooklyn Public Library answers more than 175 000 reference questions each year many of them requests for rankings information To provide quick answers to questions in the highest interest subject areas we have compiled Business Rankings Annual Working from a bibliographic file we have built up over the years we have culled

The Weekly Japan

Digest ,2002 **Making Choices about Hydrogen** Lynn Krieger Mytelka,Grant Boyle,2008 Since the mid 1990s the emergence of a hydrogen economy and the speed with which it will arrive have been vigorously debated As a disruptive technology dominant designs for the production storage and distribution of hydrogen have not yet been established Neither have performance characteristics been achieved to compete with the existing combustion engine though the efficiency and durability of hydrogen fuel cells are improving This publication highlights the uncertainties involved in making choices about hydrogen and fuel cells in planning the development policies on national energy environment and transport sector Publisher s description *Vehicle Propulsion Systems* L. Guzzella,Antonio Sciarretta,2005 Automobiles are responsible for a substantial part of the world s consumption of primary energy mostly fossil liquid hydrocarbons The reduction of the fuel consumption of these vehicles has become a top priority Many ideas to reach that objective have been presented In most cases these systems are more complex than the traditional approaches For such complex systems a heuristic design approach fails The only way to deal with this situation is to employ model based methods This text provides an introduction to the mathematical modeling and subsequent optimization of vehicle propulsion systems and their supervisory control algorithms
