

ACCOUNTING 1

Accounting Basics

Accounting Standards

- Accounting principles have been in existence since the late 1400s when Luca Pacioli, an Italian mathematician, first wrote about them.
- Modern-day accounting principles in the United States are collectively accepted **accounting principles (GAAP)**. These principles guide the work of accountants and auditors.
- The **U.S. Securities and Exchange Commission (SEC)** has regulatory authority over accounting principles used by public corporations.
 - The SEC is a federal agency responsible for enforcing the federal securities laws and regulating the securities industry.
 - It is responsible, in part, for the development of GAAP in the accounting profession via the **Financial Accounting Standards Board (FASB)**.
- The FASB develops new standards to deal with new business activities that allow input from business and accountants to be considered.
- The **International Accounting Standards Board (IASB)** develops global accounting standards.
 - Multi-national companies follow IASB standards.
 - The IASB works with other key global accounting standards bodies to create a single source of accounting standards.
- The **Government Accounting Standards Board (GASB)** sets state and local government standards for accounting.
 - The GASB is a private, non-governmental organization subject to oversight and funding by the Department of Education (DOE).
 - The federal government follows standards set by the FASB when performing accounting for its state.

Concepts & Principles

- Entity concept**
 - An enterprise must stand apart from other organizations as a separate economic unit.
 - Assets and obligations must be accounted for separately from the personal assets and obligations of its owner.
- Going concern concept (i.e., continuity assumption)** The entity will continue to exist long enough to meet its contractual obligations and carry out plans.
 - Businesses should report information on regular intervals.
 - Annual reports show income for the last 12 months and end on the last day of the fiscal year. Therefore, annual reports show the financial picture as of the last day of the fiscal year.
 - Public companies report financial information quarterly (3-month time intervals).
- Reliability principle**
 - Accounting records must be based on the most reliable data available.
 - Reliable measurements in amounts, objectives, methods, and verifiability.
- Relevance principle**
 - Accounting information must be timely.
 - Accounting information in production provides feedback and helps decision making.
- Cost principle** Assets and services acquired are recorded at actual historical cost unless their market value.
- Conservatism**
 - Loss must be recognized to avoid overvaluing assets and overstate and understate expenses and liabilities.
 - Accounting estimates should be based on conservative assumptions.
- Revenue principle**
 - Revenue should only be recorded when earned.
 - Revenue is earned when the business has completed rendering services to the customer.
 - The amount to record is equal to the cash value of services or goods.
 - The collection of cash must be reasonably assured or credit sales.
- Matching principle**
 - Expenses must be matched against revenues in the same accounting period.
 - Costs incurred in previous periods in a period are recognized as expenses.
- The accounting period**
 - The accounting period is the period connecting the business activities.
 - It is usually 1 year ending on Dec. 31 (called the fiscal year in the calendar year).
 - Other fiscal year ends will use any other date of the year elected by management.
- Cost basis accounting**
 - The impact of costs is not recognized until cash is paid or received.
 - Revenue is recorded when cash is received; expenses are recorded when cash is paid.
 - This method is adequate for small companies that don't report to external parties, but it is not acceptable under GAAP.
- Accrual basis accounting**
 - The impact of costs is recognized as they occur.
 - Revenue is recorded when earned; expenses are recorded when incurred.
 - Transactions are recorded when cash has not been received or paid.
 - This method is required by GAAP.

The Accounting Equation

Assets = Liabilities + Owners' Equity

Assets

- Assets are economic resources acquired to benefit the company in the future; they would have been transactions.
 - It could be tangible (physical) or intangible (not physical).
 - Assets are identifiable and in financial statements usually arise from either cash or non-cash transactions.
 - Assets are categorized into current and non-current.
 - Current assets: Assets that are expected to be converted into cash within one year or the normal operating cycle of the business.
 - Non-current assets: Assets that are expected to be held for more than one year or the normal operating cycle of the business.
 - Examples: Property, plant, and equipment; intangible assets; investments; and other long-term assets.
 - Assets are listed on the balance sheet in order of liquidity.
 - Assets are listed according to current value (book value).
- Liabilities** Economic obligations or debts payable to others resulting from past transactions.
 - Accounts payable** Cash or unpaid promises to pay others that arise from credit purchases.
 - Notes payable** Amounts the company must pay as a result of signing a promissory note for goods or services.
 - Owner payable** Wages and salaries payable.
 - Unsettled accounts** Liabilities incurred for services not yet fulfilled or products not yet delivered; examples include work-in-progress, unshipped orders, and uncollected receivables.
- Owner's equity** A claim by owners, the difference between assets and liabilities, divided into two main categories.
 - Contributed or paid-in capital** Amounts invested in the corporation by its owners.
 - It includes the value of common stock and preferred stock.
 - It includes the amount of profit (the total amount of capital raised in a sale of stock less the cost of the stock).
 - It includes the value of stock that has been sold but not yet received in cash or other assets.
 - Retained earnings** Amounts earned from operations.
 - It includes the amount of earnings retained from operations.
 - It includes the amount of earnings in the form of dividends.
 - It includes the amount of earnings in the form of retained earnings.
 - It is equal to the difference between total assets and total liabilities.

Financial Statements: Formal Reports of an Entity

Balance Sheet (Statement of Financial Position)

- Assets are balanced with the sum of liabilities and owners' equity as of a specific date.
- Prepared after the income statement and the statement of retained earnings.
- Current assets**
 - Cash and other resources expected to be cash, sold, or used up during the current operating cycle of the business (usually 1 year).
 - Current current assets: Cash, receivables, inventories, prepayments, supplies, and prepaid expenses.
- Noncurrent assets**
 - Assets that are not current assets.
 - Current noncurrent assets: Buildings, equipment, furniture, fixtures, leasehold improvements, and intangible assets (patents and copyrights).
- Current liabilities**
 - Liabilities that will be paid within the operating cycle (usually 1 year).
 - Typical current liabilities: Accounts payable, wages and salaries payable, notes payable, unearned revenues, and short-term notes payable.
- Noncurrent liabilities**
 - Liabilities that are not current liabilities.
 - Typical noncurrent liabilities: The noncurrent portion of payables, liabilities, capital leases, pension benefits obligations, and long-term obligations under product or service warranties.
- Equity**
 - The difference between assets and liabilities.
 - Typical equity: Capital contributed by owners and retained earnings.
