BRIDGES

ATK

ATK bridges were designed to allow the maximum amount of string vibration to transfer from the body. For slightly more sustain, strings can be installed either from the back of the instrument through the string grommets. For slightly more attack, the strings can be lowered into the bridge from the front of the instrument and hooked onto the string catch.

Intonation adjustments can be made by adjusting the intonation screws (A) at the rear of the bridge clockwise to move the saddle back, and counter clockwise to move the saddle forward.

*Note: When replacing string check with the dealer to make sure the new strings are long enough for the full scale length of the bass.

MONO-RAIL II

Mono-Rail II bridges allow the bass strings to be isolated from one another by using independent bridge plates for each string. The strings are installed by lowering the ball end into the bridge and hooking the ball end below the string catch at the rear of the bridge.

Intonation adjustments can be made by adjusting the intonation screws (A) at the rear of the bridge clockwise to move the saddle back, and counter clockwise to move the saddle forward.
