3.   APPLICATION OVERVIEW

The purpose of the ALCS or Automated Location Control System is to develop a permanent process for Cable Locate that is to be implemented and supported across the SBC enterprise. The application deals with locating buried facilities at a specified location identified by the customer / excavator. Such requests are received by the One Call Centers and are called as tickets. The One Call Centers pass the ticket information to various utility companies, of which SBC is one. The tickets thus received are scrutinized with the aid of various ALCS application components. ALCS mainly comprises of the following three components which further comprise of various sub-components.

1.   Ticket receipt/storage/archive tool.

2.   Buried Facility locator/identifier tool.

3.   Management reporting tool.

Business Overview:

The SBC's network being laid underground or aerial is the costly assets that need to be protected from damage. Any damage to the network assets like Copper cables/Fiber cables/Conduits/Aerial cables will cause a huge loss to the network infrastructure of SBC. In order to prevent the assets from damages that can be caused due to some digging by some other service providers, the ALCS application was developed. This application receives the tickets from the One Call Centers and checks the spatial database to locate the assets that are being deployed in that particular dig site. If an asset is being found in that particular dig site, then it will be marked by the Out Side Plant engineers, so that the digging contractors can dig carefully to avoid damage of the assets. As lot of tickets will come from the One Call Center, the application has an automated process of identifying the dig site and clearing the tickets based on the parameters that was set.

Business Context

ALCS is an application in which user can interact with many sub-applications. It looks like a table with the ability to sort and arrange data within the columns. The tickets from OCC are processed and stored in the database by the ALCS background processes before manual screening by screeners in ALCS Facility Viewer. As lot of tickets will come from the One Call Center, the application has an automated process of identifying the dig site and clearing the tickets based on the parameters that are set.
