Security Guide for IBM i V6.1 Jim Cook, Juan Carlos Cantalupo, MinHoon Lee, IBM Redbooks, 2009-05-29 The IBM i operation system formerly IBM i5 OS is considered one of the most secure systems in the industry From the beginning security was designed as an integral part of the system The System i platform provides a rich set of security features and services that pertain to the goals of authentication authorization integrity confidentiality and auditing However if an IBM Client does not know that a service such as a virtual private network VPN or hardware cryptographic support exists on the system it will not use it In addition there are more and more security auditors and consultants who are in charge of implementing corporate security policies in an organization In many cases they are not familiar with the IBM i operating system but must understand the security services that are available This IBM Redbooks publication guides you through the broad range of native security features that are available within IBM i Version and release level 6 1 This book is intended for security auditors and consultants IBM System Specialists Business Partners and clients to help you answer first level questions concerning the security features that are available under IBM The focus in this publication is the integration of IBM 6 1 enhancements into the range of security facilities available within IBM i up through Version release level 6 1 IBM i 6 1 security enhancements include Extended IBM i password rules and closer affinity between normal user IBM i operating system user profiles and IBM service tools user profiles Encrypted disk data within a user Auxiliary Storage Pool ASP Tape data save and restore encryption under control of the Backup Recovery and Media Services for i5 OS BRMS product 5761 BR1 Networking security enhancements including additional control of Secure Sockets Layer SSL encryption rules and greatly expanded IP intrusion detection protection and actions DB2 for i5 OS built in column encryption expanded to include support of the Advanced Encryption Standard AES encryption algorithm to the already available Rivest Cipher 2 RC2 and Triple DES Data Encryption Standard TDES encryption algorithms The IBM i V5R4 level IBM Redbooks publication IBM System i Security Guide for IBM i5 OS Version 5 Release 4 SG24 6668 remains available

IBM i Program Conversion: Getting Ready for 6.1 and Beyond Deb Landon, Mike Charlton, Theresa Gardiner, Paul Godtland, Mayumi Matsukawa, Ian J. Mills, Roger Southwick, IBM Redbooks, 2010-03-17 IBM delivered IBM i 6 1 in March 2008 With 6 1 IBM exploits the capabilities of the Machine Interface MI architecture to significantly improve programs Programs can benefit from better performance a range of new operating system and processor capabilities and even stronger system integrity To enable these improvements all MI programs created for previous releases must be converted to run on 6 1 or a later release MI programs include integrated language environment ILE and original program model OPM programs To convert a program its creation data which is a subset of observability must be available MI programs retain creation data by default so that most programs can be converted going all the way back to programs that were originally created for System 38 Even if an option was chosen to remove creation data from external access Licensed Internal Code LIC can still access the creation data if the target

releases of the program and its constituent modules are V5R1 or later. Thus a program lacks sufficient creation data for conversion only if the program or at least one of its modules was created for IBM OS 400 V4R5 or an earlier release and creation data was explicitly removed. You can run the Analyze Object Conversion ANZOBJCVN command on V5R4 or V5R3 to help plan for your upgrade. The ANZOBJCVN command identifies programs that will not convert to run on 6.1 or later releases if any and estimates the times that are required for the program conversions. It also provides information about two other types of conversions: integrated file system names and spooled files. You can access the ANZOBJCVN command by loading and applying the appropriate PTFs that are listed in this paper. This IBM Redpaper™ publication is intended for system administrators and field technicians to help them understand and prepare for upgrading or migrating to 6.1 or a later release. It explains what the program conversion is and why programs are being created or recreated on 6.1 or a later release. It then provides detailed steps for using the ANZOBJCVN tool on V5R3 or V5R4 to prepare for object conversions. Finally, it discusses the program conversion methods for converting programs to run on 6.1 or a later release. Note: The first edition of this paper was entitled IBM i5 OS Program Conversion Getting Ready for i5 OS V6R1, REDP 4293 00. The title of this second edition has been slightly modified to IBM i Program Conversion Getting Ready for 6.1 and Beyond, REDP 4293 01, to reflect the new naming conventions for IBM i.

IBM System i Security: Protecting i5/OS Data with Encryption Yessong Johng,Beth Hagemeister,John Concini,Milan Kalabis,Robin Tatam,IBM Redbooks,2008-07-24

Regulatory and industry specific requirements such as SOX Visa PCI HIPAA and so on require that sensitive data must be stored securely and protected against unauthorized access or modifications Several of the requirements state that data must be encrypted IBM i5 OS offers several options that allow customers to encrypt data in the database tables However encryption is not a trivial task Careful planning is essential for successful implementation of data encryption project In the worst case you would not be able to retrieve clear text information from encrypted data This IBM Redbooks publication is designed to help planners implementers and programmers by providing three key pieces of information Part 1 Introduction to data encryption on page 1 introduces key concepts terminology algorithms and key management Understanding these is important to follow the rest of the book If you are already familiar with the general concepts of cryptography and the data encryption aspect of it you may skip this part Part 2 Planning for data encryption on page 37 provides critical information for planning a data encryption project on i5 OS Part 3 Implementation of data encryption on page 113 provides various implementation scenarios with a step by step guide
