Deploying the BIG-IP Application Security Manager with IBM InfoSphere Guardium

Welcome to the F5 deployment Guide for securing your infrastructure with the BIG-IP Application Security Manager (ASM) and IBM® InfoSphere Guardium, IBM's database security appliance. This document provides guidance on how to deploy the BIG-IP ASM with IBM InfoSphere Guardium. By combining the powerful security and reporting features in BIG-IP ASM with the advanced database inspection functionality and reporting of Guardium, organizations can now gain an unparalleled real-time view into the operation of their websites.

IBM InfoSphere Guardium provides a simple, scalable, and powerful solution for real-time database activity monitoring. By deploying Guardium appliances to collect information from databases, your organization gains up-to-the-second insight into the activity happening at the application and data level. Now, by deploying the Database Security functionality within the BIG-IP system, you can correlate front-end information with database information. This information allows administrators to take a variety of actions, such as preventing attacks, enforcing controls, auditing access and many other essential database tasks. For example, using Guardium and BIG-IP ASM, an administrator can run a dashboard which shows in real-time which SQL statements are generated by a front-end user.

Why F5

F5 and IBM have partnered to bring this innovative solution to our joint customers. The real-time integration between BIG-IP and Guardium provides a level of introspection into the operation of your website that exceeds other solutions on the market today. The benefits of this integration include:

- BIG-IP ASM and Guardium integration allows end-user information to be correlated to individual SQL actions on the database in real-time.
- Guardium can also correlate and report on events that do not have an SQL component, enhancing the value of the Guardium solution.
